

- eXpressDSP Digital Media (XDM1.0) compliant
- Validated on DM6467 EVM
- Up to Level 5 features of the Advanced Simple Profile (ASP) supported
- Progressive and interlaced frame type picture decoding supported
- Multiple packet decoding supported
- Short video header (H.263) supported
- All AC/DC prediction supported
- 4MV and UMV modes supported
- Motion compensation pixel accuracy up to Quarter-pel.
- Both MPEG4 and H.263 style quantization is supported
- Error Resilience(ER) tools (HEC and re-sync marker) up to CIF resolution supported
- Resolutions up to PAL D1 (720 x 576) and WVGA (864 x 480) supported
- A minimum resolution of 128 x 64 supported
- YUV420 semi-planar output format with Chroma interleaved for the frames supported

Description

MPEG4 (from ISO/IEC) is a popular video coding algorithm enabling high quality multimedia services on a limited bandwidth network. MPEG4 standard defines several profiles and levels, which specify restrictions on the bit stream, and hence limits the capabilities needed to decode the bit-streams.

PRODUCT PREVIEW

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

All trademarks are the property of their respective owners.

PRODUCT PREVIEW information concerns products in the formative or design phase of development. Characteristic data and other specifications are design goals. Texas Instruments reserves the right to change or discontinue these products without notice.

Summary of Performance

This section describes the performance of Standalone MPEG4 Decoder tested on DM6467 EVM.

Table 1. Configuration Table

CONFIGURATION	ID
MPEG4 Advanced Simple Profile levels up to 5	MPEG4_DEC_002

Table 2. Cycles Information – Profiled on DM6467 EVM with Code Generation Tools Version 6.0.8

CONFIGURATION ID	PERFORMANCE STATISTICS (IN MEGA-HERTZ, MHZ)						
	TEST DESCRIPTION	AVERAGE			PEAK		
		DSP (C64X+) MHZ NON-BLOCKING	DSP (C64X+) MHZ BLOCKING	FPS (DSP @ 600 MHZ)	DSP (C64X+) MHZ NON-BLOCKING	DSP (C64X+) MHZ BLOCKING	FPS (DSP @ 600 MHZ)
MPEG4_DEC_002	flower_352x288_100fr_SP_657Kbps.mp4 (CIF@30fps, SP, 657kbps)	21	43	376	22	47	348
	flower_352x288_100fr_ASP_656kbps.mp4 (CIF@30fps, ASP, 656kbps)	22	46	359	23	50	328
	foreman_p640x480_100fr_SP_4021kbps.mp4 (VGA@30fps, SP, 4mbps)	59	142	122	60	144	120
	foreman_p640x480_100fr_ASP_4021kbps.mp4 (VGA@30fps, ASP, 4mbps)	77	168	103	84	177	98
	football_720x480_100fr_SP_4534kbps.mp4 (D1@30fps, SP, 4.5mbps)	67	158.5	109	68	162	107
	football_720x480_100fr_ASP_4525kbps.mp4 (D1@30fps, ASP, 4.5 mbps)	85	186	94	97.5	207	85

Note:

1. For calculating FPS, frame level overhead (on DSP) is added to maximum of DSP and HDVICP loads. These are actual cycles as seen from host on DM6467 EVM and will be close to cycles seen on the final system (for average case).
2. These figures are with Cache enabled on C64x+ side.
3. They are measured in standalone mode without actual framework.

PRODUCT PREVIEW

4. All numbers are based on numbers collected [both average and peak] at frame level processing @ 30fps.
5. The version of the code used to collect these numbers have the following features included:
 - i. Interrupt mode of operation – one interrupt signal processing overhead perMB pair.
 - ii. Resetting of vIMCOP and loading of code into ARM968 DTCM – once per frame.
6. Measured with program memory, stack, and I/O buffers in external memory with cache configuration : 32 KB L1P Program Cache, 32 KB L1D Data Cache and 64 KB L2 Cache. There could be a variation of approximately 1-2% in the values.

Table 3. External Memory Statistics (Host DSP)

CONFIGURATION ID	MEMORY STATISTICS(IN KB)						
	PROGRAM MEMORY	DATA MEMORY					TOTAL
		CONSTANT ³	HEAP		STACK	DPB	
			PERSISTENT	SCRATCH			
MPEG4_DEC_002	67	10	762	60	32	2200	3131

¹All these memory requirements are for DSP encoder library only. Program memory size includes DMA library also. They do not include any memory requirements from test application side. Stack, heap and code requirements for test-application are extra. Constant memory size includes code size of ARM968 since it forms constant table on DSP to enable code transfer from DSP to ARM968. All memory requirements are expressed in terms of kilobytes. There could be a variation of approximately 1-2% in the values. ²The constant size is the sum of .cinit, .bss, and .const sections used by MPEG4 encoder library. It includes the frame buffers.

Table 4. Internal Data Memory(L2) Split-up

CONFIGURATION ID	DATA MEMORY – INTERNAL(IN KB)		
	SHARED		INSTANCE
	CONSTANTS	SCRATCH	
MPEG4_DEC_002	NA	16	NA

Resource requirement:

- The entire HDVICP (0/1) is a video resource and uses 16K ITCM and 8K DTCM.
- 18 EDMA channels and 64 additional param entries are required.
- TC-3 is used for transferring data from DDR to L2

Glossary

Constants	Elements that go into .const memory section
Scratch	Memory space that can be reused across different instances of the algorithm
Shared	Sum of Constants and Scratch
Instance	Persistent-memory that contains persistent information - allocated for each instance of the algorithm

Acronyms

CIF	Common Intermediate Format
D1	720x480 or 720x576 resolutions in progressive scan
DMA	Direct Memory Access
DP	Data-Partition
DPB	Decoded Picture Buffer
EVM	Evaluation Module
QCIF	Quarter Common Intermediate Format
QVGA	Quarter Video Graphics Array
RVLC	Reversible Variable Length Coding
SQCIF	Sub Quarter Common Intermediate Format
TCM	Tightly Coupled Memory
UMV	Unrestricted Motion Vectors
VGA	Video Graphics Array
vIMCOP	Video and Imaging Co-processor sub-system.
XDAIS	eXpressDSP Algorithm Interface Standard
XDM	eXpressDSP Digital Media

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
