

VISION SDK on BIOS (v03.01.00)

Data Sheet

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.

1 Introduction

IMPORTANT NOTE:

- This datasheet has performance and feature information about use-cases running on TDA2xx (EVM), TDA2Ex (EVM) and TDA3xx (EVM). Many use-cases can be run on multiple SOC/Platforms however the measurement of performance and other metrics is done only on one of these as indicated in the use-case details.

1.1 Framework features

- Compile and build for all CPUs
 - TDA2xx system (IPU1-0, IPU1-1, IPU2, DSP1, DSP2, EVE1, EVE2, EVE3, EVE4, A15_0).
 - TDA2Px system (IPU1-0, IPU1-1, IPU2, DSP1, DSP2, EVE1, EVE2, A15_0).
 - TDA2Ex system (IPU1-0, IPU1-1, IPU2, DSP1, A15_0).
 - TDA3xx system (IPU1-0, IPU1-1, DSP1, DSP2, EVE1).
- Debug and release build profiles.
- Single place to setup memory map
 - Default 512MB DDR
- Ability to create and control links on any CPU.
- Remote log feature with ability to print logs from all CPUs to UART controlled by IPU1-0.
- CPU load profiling for all cores.
- Memory usage log for all cores.
- Run time use-cases performance statistics like frame-rate, latency, frame-drop.
- Exception handler log for IPU, DSP.
- EDMA support on all cores, wherever applicable
 - A15, IPU uses system EDMA (via EDMA3LLD library)
 - DSP uses system EDMA or local EDMA (via EDMA3LLD library)
 - EVE uses local EDMA (via EDMA3LLD library and/or EVE SW library)
- Global timestamp to keep track of common time across all CPUs.
- Buffer allocation APIs for DDR, OCMC memory, L2 memory (DSP/EVE).
- Use-Case Auto Generation tool which generates C code for Vision SDK use-cases from config file.

1.3 Features Not Supported and/or not Tested

- Capture link
 - Enabling multiple VIP ports when sub frame capture is enabled.
- VPE link
 - VPE link in DEI mode
- Algorithm link
 - Multi-channel mode NOT supported in Algorithm plugin's

For detailed list refer to

\\vision_sdk\docs\FeatureSpecificUserGuides\vision_sdk_feature_list.xlsx.

2 TDA2xx Common System Parameters

2.1 System Parameters

The system parameters mentioned below are common across all configurations unless specified otherwise.

COMPONENT	PROPERTY	VALUE
SOC	SOC Name	TDA2xx
	SOC revision	ES1.0 or ES1.1 or ES2.0
EVM	EVM Name	TI TDA2xx EVM Vision Daughter card
IPU	Clock	212.8Mhz
	L1-P cache	ENABLED
	L1-D cache	ENABLED
	Code/Data Placement	DDR
DSP	Clock	600Mhz
	L1-P cache	32KB ENABLED
	L1 D cache	32KB ENABLED
	L2 P/D cache	32KB ENABLED
	Code/Data Placement	DDR
EVE	Clock	ARP32 267.5MHz VCOP 535Mhz
	L1-P cache	ENABLED
	DMEM	USED FOR IPC and ALG TASK STACK
	Code/Data Placement	DDR
A15-0	Clock	750Mhz
	P/D cache	ENABLED
	Code/Data Placement	DDR
DDR Config	Clock	532Mhz
	Bus Width	32-bit
	Number of EMIFs	1
	DDR size	512 MB
Sensor	Part number	OV10635

COMPONENT	PROPERTY	VALUE
	PCLK	74.25Mhz
	Resolution @ frame-rate	1280x720@30fps
	Data format	YUV422 interleaved
	Bus width	8-bit
	Sync Type	HS/VS discrete sync
HDMI Receiver 1 *	Part number	SII 9127
	Resolution @ frame-rate	1920x1080@60fps
	Data format	YUV422 interleaved
	Bus width	16-bit
	Sync Type	Discrete sync with AVID and VBLK control signals
HDMI Receiver 2 *	Part number	ADV 7611
	Resolution @ frame-rate	1920x1080@60fps
	Data format	YUV422 interleaved
	Bus width	16-bit
	Sync Type	Discrete sync with AVID and VBLK control signals
LCD 1 *	Part number	7-inch, WVGA LCD #703663
	DCLK	29.232Mhz
	Resolution @ frame-rate	800x480 @ 60fps
	Data format	RGB888
	Bus width	24-bit
	Sync Type	HS/VS discrete sync
LCD 2 *	Part number	10-inch, WXGA LCD #LG LP101WX2
	DCLK	74.5Mhz
	Resolution @ frame-rate	1280x800 @ 60fps
	Data format	RGB888
	Bus width	24-bit
	Sync Type	HS/VS discrete sync
DSS Display	DSS pipe	VID1 VID2

COMPONENT	PROPERTY	VALUE
		VID3 GRPX Any or all of above used based on use-case
	DSS output port	DPI1 for LCD and HDMI for HDMI display type
	DSS VENC	LCD1 or LCD2 for LCD and HDMI for HDMI display type
	Inline scaling	ENABLED or DISABLED based on use-case

* NOTE Above table lists all HDMI receivers and LCDs supported. But at a time only one type of LCD can be connected. Same applies to other devices.

2.2 Code/Data Memory Usage

NOTE: Code/data memory for data structures is same for all configurations and all use-cases since a single binary is used for all configurations and all use-cases. These configurations are with respect to 512MB Memory map.

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	MEMORY SIZE USED
IPU1-0	Initialized section (.text, .const)	10 MB	8.8 MB
	Uninitialized section (.bss, .heap, .stack)	11 MB	10.35 MB
IPU1-1	Initialized section (.text, .const)	2 MB	227 KB
	Uninitialized section (.bss, .heap, .stack)	9 MB	2.75 MB
IPU2	Initialized section (.text, .const)	2 MB	
	Uninitialized section (.bss, .heap, .stack)	9 MB	
DSP1	Initialized section (.text, .const)	4 MB	670 KB
	Uninitialized section (.bss, .heap, .stack, .far, .fardata)	13.5 MB	8.17 MB
DSP2	Initialized section (.text, .const)	2 MB	670 KB
	Uninitialized section (.bss, .heap, .stack)	13.5 MB	8.67 MB
EVE1	Initialized section (.text, .const)	2 MB	538 KB
	Uninitialized section (.bss, .heap, .stack)	13.5 MB	1.43 MB
EVE2	Initialized section (.text, .const)	2 MB	487 KB
	Uninitialized section (.bss, .heap, .stack)	13.5 MB	5.67 MB

EVE3	Initialized section (.text, .const)	2 MB	449.8 KB
	Uninitialized section (.bss, .heap, .stack)	13.5 MB	1.43 MB
EVE4	Initialized section (.text, .const)	2 MB	449.8 KB
	Uninitialized section (.bss, .heap, .stack)	13.5 MB	1.43 MB
A15-0	Initialized section (.text, .const) Uninitialized section (.bss, .heap, .stack)	13 MB	11 MB

2.3 App Image Size

PARAMETER	VALUE
App Image size (10 CPU images and all default supported usecase enabled)	41.1 MB

This App Image contains images for all the 10 processors and all default supported usecase enabled.

3 TDA2Ex- Common System Parameters

3.1 System Parameters

The system parameters mentioned below are common across all configurations unless specified otherwise.

COMPONENT	PROPERTY	VALUE
SOC	SOC Name	TDA2Ex
	SOC revision	ES1.0 or ES2.0
EVM	EVM Name	TI TDA2Ex EVM Vision Daughter card
IPU	Clock	212.8MHz
	L1-P cache	ENABLED
	L1-D cache	ENABLED
	Code/Data Placement	DDR
DSP	Clock	600MHz
	L1-P cache	32KB ENABLED
	L1 D cache	32KB ENABLED
	L2 P/D cache	32KB ENABLED
	Code/Data Placement	DDR
A15-0	Clock	800MHz
	P/D cache	ENABLED
	Code/Data Placement	DDR
DDR Config	Clock	666Mhz
	Bus Width	32-bit
	Number of EMIFs	1
	DDR size	1 GB
Sensor	Part number	OV10635
	PCLK	74.25Mhz
	Resolution @ frame-rate	1280x720@30fps
	Data format	YUV422 interleaved
	Bus width	8-bit
	Sync Type	HS/VS discrete sync

COMPONENT	PROPERTY	VALUE
HDMI Receiver 1 *	Part number	SII 9127
	Resolution @ frame-rate	1920x1080@60fps
	Data format	YUV422 interleaved
	Bus width	16-bit
	Sync Type	Discrete sync with AVID and VBLK control signals
HDMI Receiver 2 *	Part number	ADV 7611
	Resolution @ frame-rate	1920x1080@60fps
	Data format	YUV422 interleaved
	Bus width	16-bit
	Sync Type	Discrete sync with AVID and VBLK control signals
LCD 1 *	Part number	10-inch, WXGA LCD #LG LP101WX2
	DCLK	74.5Mhz
	Resolution @ frame-rate	1280x800 @ 60fps
	Data format	RGB888
	Bus width	24-bit
	Sync Type	HS/VS discrete sync
DSS Display	DSS pipe	VID1 VID2 VID3 GRPX Any or all of above used based on use-case
	DSS output port	DPI1 for LCD and HDMI for HDMI display type
	DSS VENC	LCD1 or LCD2 for LCD and HDMI for HDMI display type
	Inline scaling	ENABLED or DISABLED based on use-case

* NOTE Above table lists all HDMI receivers and LCDs supported. But at a time only one type of LCD can be connected. Same applies to other devices.

3.2 Code/Data Memory Usage

NOTE: Code/data memory for data structures is same for all configurations and all use-cases since a single binary is used for all configurations and all use-cases. These configurations are with respect to 512MB Memory map.

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	MEMORY SIZE USED
IPU1-0	Initialized section (.text, .const)	10 MB	8.6 MB
	Uninitialized section (.bss, .heap, .stack)	12 MB	8.7MB
IPU1-1	Initialized section (.text, .const)	2 MB	226 KB
	Uninitialized section (.bss, .heap, .stack)	10 MB	2.76 MB
IPU2	Initialized section (.text, .const)	2 MB	
	Uninitialized section (.bss, .heap, .stack)	10 MB	
DSP1	Initialized section (.text, .const)	2 MB	669 KB
	Uninitialized section (.bss, .heap, .stack, .far, .fardata)	15 MB	8.17 MB
A15-0	Initialized section (.text, .const) Uninitialized section (.bss, .heap, .stack)	13 MB	11 MB

3.3 App Image Size

PARAMETER	VALUE
App Image size (5 CPU images and all default supported usecase enabled)	23 MB

This App Image contains images for all the 5 processors and all default supported usecase enabled.

4 TDA3xx Common System Parameters

4.1 System Parameters

The system parameters mentioned below are common across all configurations unless specified otherwise.

COMPONENT	PROPERTY	VALUE
SOC	SOC Name	TDA3xx
	SOC revision	1.0 or 2.0
EVM	EVM Name	TI TDA3xx EVM
IPU	Clock	212.8Mhz
	L1-P cache	ENABLED
	L1-D cache	ENABLED
	Code/Data Placement	DDR
DSP	Clock	500Mhz
	L1-P cache	32KB ENABLED
	L1 D cache	32KB ENABLED
	L2 P/D cache	32KB ENABLED
	Code/Data Placement	DDR
EVE	Clock	ARP32 250MHz VCOP 500Mhz
	L1-P cache	ENABLED
	DMEM	USED FOR IPC and ALG TASK STACK
	Code/Data Placement	DDR
DDR Config	Clock	532Mhz
	Bus Width	32-bit
	Number of EMIFs	1
	DDR size	512 MB
Sensor 1 *	Part number	OV10635
	PCLK	74.25Mhz
	Resolution @ frame-rate	1280x720@30fps
	Data format	YUV422 interleaved
	Bus width	8-bit

COMPONENT	PROPERTY	VALUE
Sensor 2 *	Sync Type	HS/VS discrete sync
	Part number	OV10640 CSI2
	PCLK	90 MHz
	Resolution @ frame-rate	1280x720@23fps
	Data format	RAW Bayer
	Bus width	4 lanes
	Sync Type	HS/VS discrete sync
Sensor 3 *	Part number	OV10640 Parallel
	PCLK	90 MHz
	Resolution @ frame-rate	1280x720@23fps
	Data format	RAW Bayer
	Bus width	12-bit
	Sync Type	HS/VS discrete sync
Sensor 4 *	Part number	AR0132
	PCLK	74.25 MHz
	Resolution @ frame-rate	1280x720@60fps
	Data format	RAW Bayer
	Bus width	12-bit
	Sync Type	HS/VS discrete sync
Sensor 5 *	Part number	AR0140
	PCLK	74MHz
	Resolution @ frame-rate	1280x800 @ 30fps
	Data format	Bayer
	Bus width	12bit
	Sync Type	Discrete sync
HDMI Receiver *	Part number	ADV 7611
	Resolution @ frame-rate	1920x1080@60fps
	Data format	YUV422 interleaved
	Bus width	16-bit
	Sync Type	Discrete sync with AVID and VBLK control signals

COMPONENT	PROPERTY	VALUE
LCD 1 *	Part number	10-inch, WXGA LCD #LG LP101WX2
	DCLK	74.5Mhz
	Resolution @ frame-rate	1280x800 @ 60fps
	Data format	RGB888
	Bus width	24-bit
	Sync Type	HS/VS discrete sync
HDMI TX 1 *	Part number	SII 9022A
	DCLK	148.5Mhz
	Resolution @ frame-rate	1920x1080 @ 60fps
	Data format	RGB888
	Bus width	24-bit
	Sync Type	HS/VS discrete sync
SD Display 1	Part number	On-Chip SDDAC
	DCLK	27Mhz
	Resolution @ frame-rate	NTSC: 720x240 @ 60 fps (Interlaced) PAL: 720x288 @ 50 fps (Interlaced)
DSS Display	DSS pipe	VID1 VID2 GRPX Any or all of above used based on use-case
	DSS output port	DPI1 for LCD, HDMI (Off-Chip HDMI TX)
	DSS VENC	LCD1 for LCD and HDMI (Off-Chip HDMI TX) SDDAC for NTSC/PAL Display
	Inline scaling	ENABLED or DISABLED based on use-case

* NOTE Above table lists all Sensors, HDMI receivers and LCDs supported. But at a time only one type of sensor can be connected. Same applies to other devices.

4.2 Code/Data Memory Usage

NOTE: Code/data memory for data structures is same for all configurations and all use-cases since a single binary is used for all configurations and all use-cases. These configurations are with respect to 512MB Memory map.

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	MEMORY SIZE USED
IPU1-0	Initialized section (.text, .const)	10 MB	7.5 MB
	Uninitialized section (.bss, .heap, .stack)	13 MB	11.8 MB
IPU1-1	Initialized section (.text, .const)	2 MB	219 KB
	Uninitialized section (.bss, .heap, .stack)	10 MB	2.80 MB
DSP1	Initialized section (.text, .const)	2 MB	631KB
	Uninitialized section (.bss, .heap, .stack)	14 MB	7.25 MB
DSP2	Initialized section (.text, .const)	2 MB	631KB
	Uninitialized section (.bss, .heap, .stack)	14 MB	7.75 MB
EVE1	Initialized section (.text, .const)	2 MB	400 KB
	Uninitialized section (.bss, .heap, .stack)	13.5 MB	1.39 MB

4.3 App Image Size

PARAMETER	VALUE
App Image size (5 CPU images and all default supported usecase enabled)	25.5 MB

This App Image contains images for all the 5 processors and all default supported usecase enabled.

5 Single Channel Capture Use Case

5.1 Overview

This use case consists of continuous capture and display with optional frame copy using DSP/EVE/A15 in between or edge detect algorithm using EVE.

Frame copy/Edge Detect is used to show how an algorithm can be integrated in a capture to display data flow.

Capture can be done at 720p@30fps (OV Sensor) or 1080p@60fps (HDMI capture) via the VIP1 Slice1 PortA. Display can be on LCD via DPI1 output port or on HDMI display via HDMI output port. If required, a scalar is enabled as part of the capture path to match display resolution. The output interface runs at 60fps. In case incoming frames to display are at 30fps (when using OV Sensors), then the Display driver will repeat frames.

5.2 DataFlow

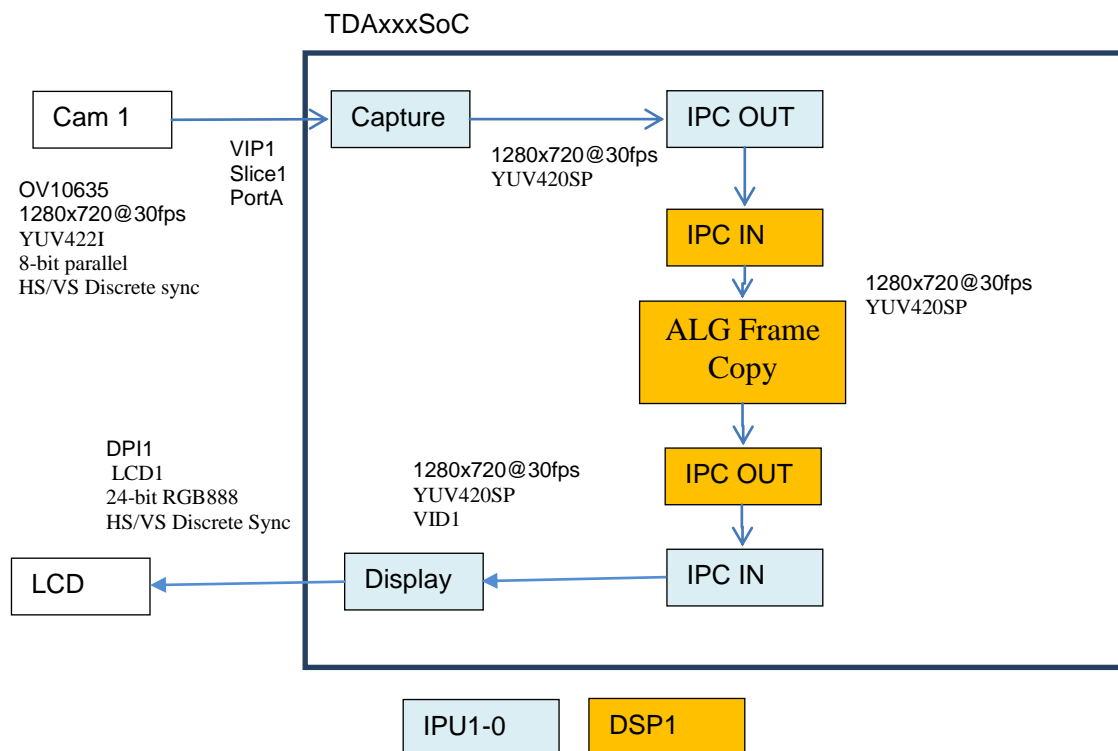

5.2.1 Configuration 1: Capture to Display on IPU 1-0

This configuration is useful for board checkout. Since only IPU1-0 CPU is required to run this use-case so it is easy to build and load and run. The data flow below shows a 720p30 capture with display on LCD. Alternately HDMI capture and HDMI display are also supported.

5.2.2 Configuration 2: Capture to Display via Frame Copy Algorithm DSP1

Frame copy algorithm on DSP uses DSP local EDMA for frame copy. EDMA3LLD library is used to access EDMA. The data flow below shows a 720p30 capture with display on LCD. Alternately HDMI capture and HDMI display are also supported.

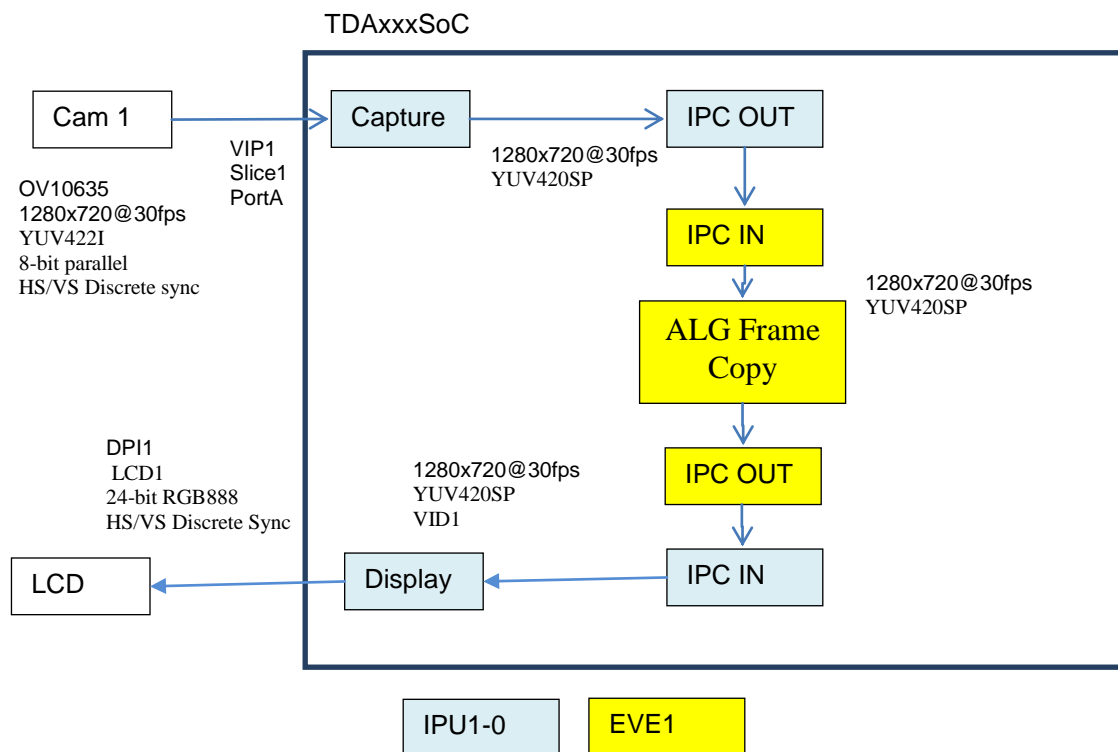

5.2.3 Configuration 3: Capture to Display via Frame Copy Algorithm EVE1

This is same as configuration 2 except EVE1 is used for frame copy instead of DSP1.

EVE1 uses its local DMA for frame copy. EVE SW library is used to do the EDMA.

EDMA3LLD is not used since normally algorithms on EVE will use the EVE SW library for EDMA.

The data flow below shows a 720p30 capture with display on LCD. Alternately HDMI capture and HDMI display are also supported.

5.2.4 Configuration 4: Capture to Display via via Frame Copy Algorithm A15 (TDA2xx Only)

This is same as configuration 2 except A15 is used for frame copy instead of DSP1.

A15 uses CPU copy via cache for frame copy. Cache invalidates and write back are done as required in the process.

EDMA is not used since normally algorithms on A15 prefer to use CPU access via cache. System EDMA APIs via EDMA3LLD are however available for access via A15.

The data flow below shows a 720p30 capture with display on LCD. Alternately HDMI capture and HDMI display are also supported.

5.3 System Parameters (TDA2xx)

Refer to section 2.1 for common system parameters.

The benchmarks in this section are computed for 720p30fps capture and HDMI display (1080p60) scenario.

5.4 CPU Loading and Task Info (TDA2xx)

5.4.1 Total CPU Load

NOTE: DSP and EVE use frame copy EDMA in polled mode, since normally in between DMA, algorithm computation is done.

NOTE: A15 uses frame copy in CPU mode (via cache) hence its CPU load is higher than DSP/EVE.

CPU	LOAD TYPE	CPU LOAD (CONFIG1 IPU ONLY)	CPU LOAD (CONFIG2 DSP FC ALG)	CPU LOAD (CONFIG3 EVE FC ALG)	CPU LOAD (CONFIG4 A15 FC ALG)
IPU1-0	HWI	1.4%	1.8%	1.7%	1.7%
	SWI	0.5%	0.6%	0.6%	0.6%
	Total	11.7%	15.8%	13.2%	12.9%
DSP1	HWI	NA	0.3%	NA	
	SWI		0.1%		
	Total		4.5%		
EVE1	HWI	NA		0.9%	NA
	SWI			0.2%	
	Total			7.2%	
A15-0	HWI	NA			0.1%
	SWI				0.1%
	Total				6.2%

5.4.2 Task Level Information and Task Level CPU Load

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD (CONFIG1 IPU ONLY)	CPU LOAD (CONFIG 2 DSP FC ALG)	CPU LOAD (CONFIG 3 EVE FC ALG)	CPU LOAD (CONFIG 4 A15 FC ALG)
IPU 1-0	Stat Collector	Statistics collector	3.0%	3.0%	3.7%	3.6%
	Capture	Capture frames via VIP port	0.2%	0.2%	0.2%	0.2%
	Display	Display frames via DSS	0.5%	0.5%	0.5%	0.5%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	1.3%	1.5%	1.5%	1.3%
	IPC OUT	To send frame to another processor	NA	0.6%	0.6%	0.6%

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD (CONFIG1 IPU ONLY)	CPU LOAD (CONFIG 2 DSP FC ALG)	CPU LOAD (CONFIG 3 EVE FC ALG)	CPU LOAD (CONFIG 4 A15 FC ALG)
	IPC IN	To receive frames from another processor		0.3%	0.3%	0.3%
DSP 1	*IPC + ALG Frame Copy	Frame copy + IPC	NA	3.9%	NA	
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load		0.2%		
EVE 1	*IPC + ALG Frame Copy	Framecopy + IPC	NA		5.9%	NA
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load			0.2%	
A15- 0	*IPC + ALG Frame Copy	Copy frames from input buffer to output buffer Using CPU copy via cache	NA			4.5%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load				1.5%

*NOTE: On DSP and similarly on EVE all links run in a single thread.

NOTE: CPU load of 0.0% means the CPU load was so low it could not be measured with sufficient granularity.

NOTE: There could be minor variations of +/-0.1% CPU load in different runs of the same use-case

NOTE: Graphics load is not accounted for in these measurements

NOTE: Other than above tasks few additional tasks as listed below are active in each processor

- Message Q task: This task is used to listen to control messages sent by any other core. Normally at run-time very few control messages are sent hence this task does not appear in the task load print log
- Processor link task: This task is used to send generic non-link specific messages to another CPU. Normally at run-time very few messages are sent to this task hence this task does not appear in the task load print log
- Remote log client task (on IPU1-0 only): This task looks at the shared remote log buffer and outputs any strings to UART terminal. Normally during run-time prints are not done hence this task does not appear in the task load log

5.5 System Performance (TDA2xx)

COMPONENT	PARAMETER	CONFIG1 IPU ONLY	CONFIG2 DSP FC ALG	CONFIG3 EVE FC ALG	CONFIG4 A15 FC ALG
Capture	Output FPS	30fps	30fps	30fps	30fps
ALG Frame Copy (DSP / A15 / EVE)	Output FPS	NA	30fps	30fps	30fps
	Avg copy time per frame		1.16ms	1.2ms	1.53ms
Display	Input FPS	30fps	30fps	30fps	30fps
	VENC FPS	60fps	60fps	60fps	60fps

NOTE: FPS numbers are rounded off to nearest integer

NOTE: The above benchmarks are computed for 720p30 fps capture and HDMI display (1080p60)

5.6 System Memory Usage (TDA2xx)

5.6.1 Code/Data Memory Usage

Refer section 2.2 for common Code/Data Memory usage.

5.6.2 Heap Memory Usage

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	MEMORY SIZE USED (CONFIG1 IPU ONLY)	MEMORY SIZE USED (CONFIG2 DSP FC ALG)	MEMORY SIZE USED (CONFIG3 EVE FC ALG)	MEMORY SIZE USED (CONFIG4 A15 FC ALG)
IPU1-0	Local Heap	256 KB	15 KB	15 KB	15 KB	15 KB
	HDVPSS Descriptor Mem	1MB	114 KB	114 KB	114 KB	114 KB
DSP1	L2	221 KB	NA	0 KB	NA	
	Local Heap	512 KB		24 KB		
EVE1	L2	22 KB	NA		0 KB	NA
	Local Heap	256 KB			24 KB	
A15	Local Heap	6144 KB	NA			62 KB
Shared Memory	SR0 DDR	128 KB	0KB	0KB	0KB	0KB
	SR1 Frame Buffer	350 MB	10 MB	14 MB	14 MB	14 MB
	SR OCMC	0 KB	0 KB	0 KB	0 KB	0 KB
	Remote Log Buffer	160 KB	158 KB	158 KB	158 KB	0KB

NOTE:

- SR1 Frame Buffer now static memory allocation .map file show all memory used but in actual we don't know how much memory used. This is applicable all usecase.
- In case ECC_FFI_INCLUDE defined, three additional memory sections are added "SR1_BUFF_ECC_ASIL", "SR1_BUFF_ECC_QM" and "SR1_BUFF_NON_ECC_ASIL" with sizes 1MB, 40MB and 1MB respectively. These sections are used only by "safeframecopy" plugin and is not documented in the above table.

5.6.3 Heap Memory Usage

PARAMETER	BANDWIDTH	(CONFIG1 IPU ONLY)	(CONFIG2 DSP FC ALG)	(CONFIG3 EVE FC ALG)	(CONFIG4 A15 FC ALG)
EMIF Read Only	Avg	358 MB/s	402 MB/s	406 MB/s	359 MB/s
	Peak	522 MB/s	711 MB/s	750 MB/s	535 MB/s
EMIF Write Only	Avg	57 MB/s	99 MB/s	101 MB/s	58 MB/s
	Peak	124 MB/s	369 MB/s	376 MB/s	138 MB/s
EMIF Read + Write	Avg	415 MB/s	501 MB/s	507 MB/s	417 MB/s
	Peak	639 MB/s	1080 MB/s	1114 MB/s	674 MB/s

5.7 Other Benchmarks (TDA2xx)

5.7.1 Processing Latency

		LATENCY (CONFIG1 IPU ONLY)	LATENCY (CONFIG2 DSP FC ALG)	LATENCY (CONFIG3 EVE FC ALG)	LATENCY (CONFIG4 A15 FC ALG)
Capture to Display Latency	Avg	0.39ms	1.8ms	2.4ms	2.1ms
	Min	0.3ms	1.4ms	2.1ms	1.9ms
	Max	0.92ms	2.1ms	3.0ms	2.5ms

NOTE:

- This latency is as measured inside the system by software.
- There will an additional 1/(capture rate) added on top of this from sensor/receiver itself.
- There will an additional 1/(display rate) added on top of this for the frame to actually get displayed on the screen.
- Thus e.g. in a scenario of display at 60fps and capture at 30fps - 16.67ms + 33.33ms needs to be added to latency figures in above table to get true capture to display latency

5.7.2 Boot Time

PARAMETER	VALUE
SBL to App main() (QSPI Boot) The boot time will change based on the mode of boot – SD, NOR flash or QSPI.	1.589s
main() to Use-case create	0.340s
Use-case create start to Live preview on display (max value from all 4 configurations)	0.065 s
Total Boot time	1.994s

QSPI Boot time measurement done with TDA2xx ES2.0 samples
GUI and Sensor initialization time not accounted for.

6 Subframe copy Use case

6.1 Overview

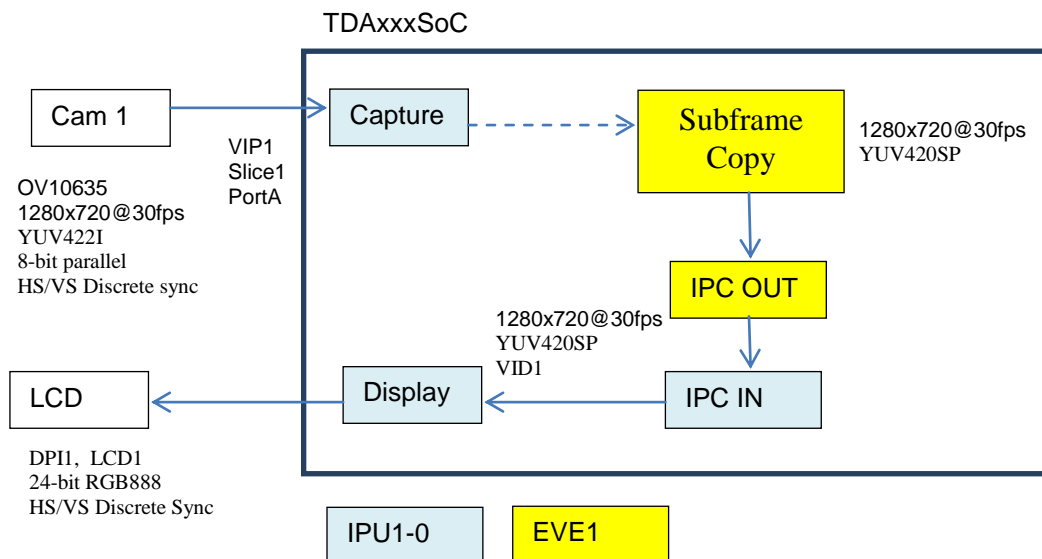

This configuration is used to demonstrate a low-latency path which utilizes the subframe capture feature.

6.2 DataFlow

6.2.1 Subframe copy example

The Capture can be either OV10635 Sensor @720p30 or HDMI @1080p60 via the VIP1 Slice1 PortA. Scalar is required to be enabled for this feature. The Capture link enables subframe-capture mode and configures the VIP but does not process any frame data. Hence no IPC link is required between the capture link on IPU1_0 and Subframe copy link on EVE1. The Subframe copy link registers interrupts with VIP at subframe and frame boundaries. Whenever a sub-frame is received an EDMA transfer for the data is initiated onto display buffer. Subframe copy algorithm on EVE uses local EDMA for subframe copy. EDMA3LLD library is used to access EDMA. The display link processes data at frame boundaries. Display can be on LCD via DPI1 output port or on HDMI display via HDMI output port. The output interface runs at 60fps. In case incoming frames to display are at 30fps (when using OV Sensors), then the Display driver will repeat frames.

The data flow below shows OV Sensor capture and LCD display. Alternately HDMI capture and HDMI display are also supported.

6.3 System Parameters (TDA2xx)

Refer to section 2.1 for common system parameters.

The benchmarks in this section are computed for OV10635capture and HDMI display (1080p60) scenario.

6.4 CPU Loading and Task Info (TDA2xx)

6.4.1 Total CPU Load

CPU	LOAD TYPE	CPU LOAD
IPU1_0	HWI	1.5%
	SWI	0.5%
	Total	11.3%
EVE1	HWI	3.0%
	SWI	0.2%
	Total	9.1%

6.4.2 Task Level Information and Task Level CPU Load

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD
IPU1-0	Stat Collector	Statistics collector	3.0%
	Capture	Capture frames from sensor via VIP port	0.0 %
	Display	Display via DSS	0.5%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	1.4%
	IPC IN	To receive frames from another processor	0.3%
*EVE1	IPC +ALG Subframe copy	Algsubframe copy + IPC	5.6%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.3%

*NOTE: On EVE all links run in a single thread.

NOTE: CPU load of 0.0% means the CPU load was so low it could not be measured with sufficient granularity in load calculations

NOTE: There could be minor variations of +/-0.1% CPU load in different runs of the same use-case

NOTE: Graphics load is not accounted for in these measurements

NOTE: Other than above tasks few additional tasks as listed below are active in each processor

- Message Q task: This task is used to listen to control messages sent by any other core. Normally at run-time very few control messages are sent hence this task does not appear in the task load print log
- Processor link task: This task is used to send generic non-link specific messages to another CPU. Normally at run-time very few messages are sent to this task hence this task does not appear in the task load print log
- Remote log client task (on IPU1-0 only): This task looks at the shared remote log buffer and outputs any strings to UART terminal. Normally during run-time prints are not done hence this task does not appear in the task load log

6.5 System Performance (TDA2xx)

COMPONENT	PARAMETER	
ALG-SubframeCopy (EVE1)	Input fps	30fps
	Output fps	30fps
Display	Input fps	30fps
	VENC fps	60fps

NOTE: The ALG subframe copy link processes ISRs from VIP for subframe and frame complete events. When the alg plugin link is in running state no other command except data command is processed, to ensure the low latency path functions effectively. Hence the stats for this link are not queries/printed on UART. The figures mentioned above have been interpreted from other logs and performance of IPC and Display links.

NOTE: FPS numbers are rounded off to nearest integer

6.6 System Memory Usage (TDA2xx)

6.6.1 Code/Data Memory Usage

Refer section 2.2 for common Code/Data Memory usage

6.6.2 Heap Memory Usage

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	MEMORY SIZE USED
IPU1-0	Local Heap	256 KB	15 KB
	HDVPSS Descriptor Mem	1MB	114 KB
EVE1	L2	24 KB	0 KB
	Local Heap	256 KB	14 KB
Shared Memory	SR0	128 KB	0 MB
	Frame Buffer (SR1)	350MB	9 MB
	SR2 OCMC	512 KB	0 KB
	Remote Log Buffer	160 KB	158 KB

Note: Sub frames are allocated from OCMC RAM1 - 512KB

6.6.3 DDR Bandwidth

PARAMETER	BANDWIDTH	
EMIF Read Only	Avg	381 MB/s
	Peak	558 MB/s
EMIF Write Only	Avg	70 MB/s
	Peak	145 MB/s
EMIF Read + Write	Avg	451 MB/s
	Peak	703 MB/s

6.7 Other Benchmarks (TDA2xx)

6.7.1 Processing Latency

	LATENCY	
Capture to Display Latency (Display VID 1)	Avg	0.66ms
	Min	0.61ms
	Max	0.79ms

NOTE:

- This latency is as measured inside the system by software.
- There will an additional $1/(\text{capture rate})$ added on top of this from sensor/receiver itself.
- There will an additional $1/(\text{display rate})$ added on top of this for the frame to actually get displayed on the screen.
- Thus e.g. in a scenario of display at 60fps and capture at 30fps - 16.67ms + 33.33ms needs to be added to latency figures in above table to get true capture to display latency

6.7.2 Boot Time

PARAMETER	DURATION
SBL to App main() (QSPI Boot) The boot time will change based on the mode of boot – SD, NOR flash or QSPI.	1.589s
main() to Use-case create	0.340s
Use-case create start to Live preview on display	0.050 s
Total Boot time	1.979s

QSPI Boot time measurement done with TDA2xx ES2.0 samples GUI and Sensor initialization time not accounted for.

7 Dense Optical Flow Usecase

7.1 Overview

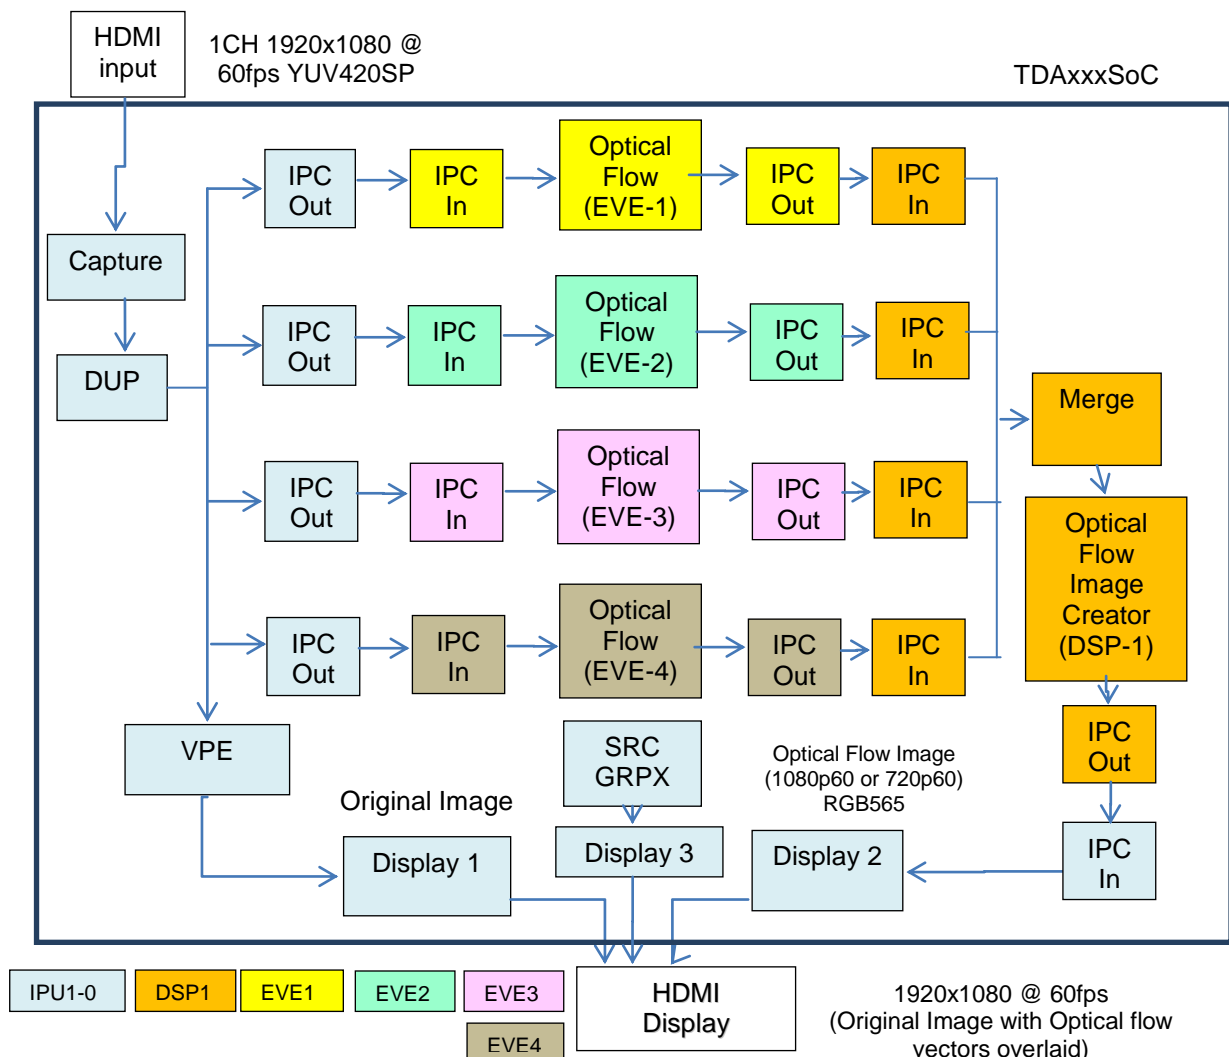

This configuration is used to demonstrate the capability of EVE. The display type is restricted to HDMI alone.

7.2 DataFlow

7.2.1 Dense Optical Flow example

The Capture can be either OV10635 Sensor @720p30 or HDMI @1080p60. The captured buffer is duplicated by DUP link running on IPU1-0 and sent to all 4 EVEs. A Dense optical flow algorithm runs on the EVEs. An algorithm setting is available by which one can choose to run a 1 pyramid (1080p60) or 2 pyramid (720p60) mode. All 4 EVEs are used in this use-case for frame processing. Each EVE processes 1 out of 4 frames. The output from the 4 EVEs is merged on DSP1 and post an Optical Flow Image creator sent to HDMI display. The original image after scaling using VPE is also displayed alongwith some overlaid graphics. The data flow below shows an HDMI capture. Alternately OV Sensor capture is also supported. This configuration supports ONLY HDMI display.

NOTE: VPE, EVE2, EVE3, EVE4 only valid in TDA2xx

7.3 System Parameters (TDA2xx)

Refer to section 2.1 for common system parameters.

The benchmarks in this section are computed for OV10635capture and HDMI display (1080p60) scenario.

7.4 CPU Loading and Task Info (TDA2xx)

7.4.1 Total CPU Load

CPU	LOAD TYPE	CPU LOAD (CONFIG - ALG 1 PYRAMID)	CPU LOAD (CONFIG - ALG 2 PYRAMID)
IPU1_0	HWI	2.8%	3.0%
	SWI	0.9%	0.9%
	Total	16.8%	14.3%
DSP1	HWI	0.3%	0.3%
	SWI	0.1%	0.0%
	Total	14.3%	15.3%
EVE1	HWI	0.7%	0.7%
	SWI	0.2%	0.2%
	Total	18.8%	28.4%
EVE2	HWI	0.7%	0.7%
	SWI	0.2%	0.2%
	Total	18.7%	28.3%
EVE3	HWI	0.7%	0.7%
	SWI	0.2%	0.2%
	Total	16.5%	28.5%
EVE4	HWI	0.7%	0.7%
	SWI	0.2%	0.2%
	Total	18.8%	28.3%

7.4.2 Task Level Information and Task Level CPU Load

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD (CONFIG ALG 1 PYRAMID)	CPU LOAD (CONFIG ALG 2 PYRAMID)
IPU1-0	Stat Collector	Statistics collector	3.8%	3.0%
	Capture	Capture frames from sensor via VIP port	0.2%	0.2%
	Display1	Display scaled frames via DSS	0.6%	0.5%
	Display2	Display DOF frame via DSS	0.5%	0.5%
	DUP	Duplicate frame to send to display without scaling as well as to VPE to scale	0.3%	0.3%
	VPE	Frame scaling	1.1%	1.2%

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD (CONFIG ALG 1 PYRAMID)	CPU LOAD (CONFIG ALG 2 PYRAMID)
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	1.8%	2.1%
	IPC OUT 0	To send frame to another processor	0.6%	0.6%
	IPC OUT 1	To send frame to another processor	0.4%	0.5%
	IPC OUT 2	To send frame to another processor	0.4%	0.5%
	IPC OUT 3	To send frame to another processor	0.4%	0.4%
	IPC IN	To receive frames from another processor	0.3%	0.3%
DSP1	IPC + ALGVector to Image	To receive frames from another processor	13.8%	14.7%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.1%	0.3%
EVE1	IPC + Optical Flow	IPC Load + Dense Optical Flow Algorithm	17.6%	27.1%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.3%	0.4%
EVE2	IPC + Optical Flow	IPC Load + Dense Optical Flow Algorithm	17.6%	27.1%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.2%	0.3%
EVE3	IPC + Optical Flow	IPC Load + Dense Optical Flow Algorithm	15.4%	27.3%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.2%	0.3%
EVE4	IPC + Optical Flow	IPC Load + Dense Optical Flow Algorithm	17.7%	27.1%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.2%	0.3%

NOTE: On DSP and similarly on EVE all links run in a single thread.

NOTE: CPU load of 0.0% means the CPU load was so low it could not be measured with sufficient granularity in load calculations

NOTE: There could be minor variations of +/-0.1% CPU load in different runs of the same use-case

NOTE: Graphics load is not accounted for in these measurements

NOTE: Other than above tasks few additional tasks as listed below are active in each processor

- Message Q task: This task is used to listen to control messages sent by any other core. Normally at run-time very few control messages are sent hence this task does not appear in the task load print log
- Processor link task: This task is used to send generic non-link specific messages to another CPU. Normally at run-time very few messages are sent to this task hence this task does not appear in the task load print log
- Remote log client task (on IPU1-0 only): This task looks at the shared remote log buffer and outputs any strings to UART terminal. Normally during run-time prints are not done hence this task does not appear in the task load log

7.5 System Performance (TDA2xx)

COMPONENT	PARAMETER	(CONFIG ALG 1 PYRAMID)	(CONFIG ALG 2 PYRAMID)
Capture	Output FPS	30fps	30fps
ALG DOF (EVE)	Output FPS	~7.5 fps per EVE	~7.5 fps per EVE
	Avg time per frame	20.6ms	34.4ms
ALG Vector to Image (DSP1)	Output FPS	30fps	30fps
Display (DOF image)	Input FPS	30fps	30fps
	VENC FPS	60fps	60fps

NOTE: FPS numbers are rounded off to nearest integer

NOTE: The figures are for HDMI capture scenario.

7.6 System Memory Usage (TDA2xx)

7.6.1 Code/Data Memory Usage

Refer section 2.2 for common Code/Data Memory usage

7.6.2 Heap Memory Usage

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	MEMORY SIZE USED (CONFIG ALG PYRAMID 1)	MEMORY SIZE USED (CONFIG ALG PYRAMID 2)
IPU1-0	Local Heap	256 KB	15 KB	15 KB
	HDVPSS Descriptor Mem	1MB	114 KB	114 KB
DSP1	L2	221 KB	94 KB	45 KB
	Local Heap	512 KB	12 KB	12 KB
EVE1	L2	24 KB	3 KB	3 KB
	Local Heap	256 KB	12 KB	12 KB
EVE2	L2	24 KB	3 KB	3 KB
	Local Heap	256 KB	12 KB	12 KB
EVE3	L2	24 KB	3 KB	3 KB
	Local Heap	256 KB	12 KB	12 KB
EVE4	L2	24 KB	3 KB	3 KB
	Local Heap	256 KB	12 KB	12 KB
Shared Memory	SR0	128 KB	36 KB	36 KB
	Frame Buffer (SR1)	350 MB	50 MB	50 MB
	SR2 OCMC	0KB	0KB	0KB
	Remote Log Buffer	160 KB	158 KB	158 KB

7.6.3 DDR Bandwidth

PARAMETER	BANDWIDTH	ALG PYRAMID 1	ALG PYRAMID 2
EMIF Read Only	Avg	560 MB/s	745 MB/s
	Peak	849 MB/s	1426 MB/s
EMIF Write Only	Avg	154 MB/s	176 MB/s
	Peak	390 MB/s	488 MB/s
EMIF Read + Write	Avg	714 MB/s	921 MB/s
	Peak	1166 MB/s	1914 MB/s

7.7 Other Benchmarks (TDA2xx)

7.7.1 Processing Latency

		LATENCY (CONFIG ALG PYRAMID 1)	LATENCY (CONFIG ALG PYRAMID 2)
Capture to Display Latency (Display VID 2)	Avg	26.7ms	41.0ms
	Min	26.5ms	40.7ms
	Max	27.3ms	41.7ms

NOTE:

- This latency is as measured inside the system by software.
- There will an additional $1/(\text{capture rate})$ added on top of this from sensor/receiver itself.
- There will an additional $1/(\text{display rate})$ added on top of this for the frame to actually get displayed on the screen.
- Thus e.g. in a scenario of display at 60fps and capture at 30fps - $16.67\text{ms} + 33.33\text{ms}$ needs to be added to latency figures in above table to get true capture to display latency

7.7.2 Boot Time

PARAMETER	DURATION (CONFIG 6 ALG PYRAMID 1)	DURATION (CONFIG 6 ALG PYRAMID 2)
SBL to App main() (QSPI Boot) The boot time will change based on the mode of boot – SD, NOR flash or QSPI.	1.589s	1.589s
main() to Use-case create	0.340s	0.340s
Use-case create start to Live preview on display	0.456s	0.255s
Total Boot time	2.385s	2.184s

QSPI Boot time measurement done with TDA2xx ES2.0 samples
GUI and Sensor initialization time not accounted for.

8 Single Channel Analytics2 on TDA2xx & TDA3xx - EUNCAP usecase

8.1 Overview

EUNCAP (European New Car Assessment Programme) provides consumers an independent assessment of the safety level with its five star rating systems for cars. Most of the OEMs in automotive market will strive to get highest start ranking for their car. This involves supporting algorithms required for autonomous emergency breaking, Prevention of Speed & Impaired Driving, and lateral assist systems. It is preferable to have it on a single central processing unit / ECU. The usecase showcases how this can be achieved with TDA3x efficiently; same use case works on TDA2x as well which has a lot more compute power.

8.2 DataFlow

8.2.1 Single channel analytics example

The demo accepts HD (720p / 1MP) video input from HDMI player, applies all below mentioned algorithms and produces output video augmented with information / results from algorithms.

- Pedestrian, Bi-cyclist and Powered Two Wheeler Detection
- Traffic Sign Detection and Recognition (TSR)
- Vehicle Detection (VD)
- Traffic Light Recognition (TLR)
- Lane Departure warning (LDW)
- Structure From Motion (SFM), Ground Plane Estimation and distance of objects on ground

These 6 algorithms run on 2 C66x DSPs and 1 EVE on TDA3x /TDA2x at OPP_NOM. Video input is a recorded video – “clip3” from VISION_SDK_02.XX.XX.XX.tar.gz

The term “analytics2” – This indicates this demo is significantly different than the traditional single cam analytics demo in VisionSDK. Compared to earlier FC analytics demo (until VisionSDK 2.8) this uses different alg plugins underneath and changes are done to show full entitlement of TDA3x SOC such that all 6 algorithms can co-exist in an optimized way to produce real time output for 1MP video. In addition to improved run-time, demo also shows improved output with accurate detections and significantly reduced false detections.

Image pyramid generation – The demo works on TDA3x and TDA2x both. Object Detect algorithm uses image pyramid (input image scaled down to different resolutions based on numScales and steps). The only difference between TDA3x and TDA2x is image pyramid generation; TDA3x uses ISS resizer to generate scales, while TDA2x uses VPE for the same. Traditionally, in the analytics demo this was happening on EVE, eating up almost 30% CPU, it is now being intelligently offloaded to h/w IPs (isp resizer / VPE) freeing up EVE for algorithmic computations.

Use of CNN - This use case exercise the latest deep learning technology convolution Neural Network (CNN) for object classification. CNN here helps in Object Classification and its currently being applied to recognize different traffic signs after localization of it. Based on training data and input from Object Detection algorithm this approach gives confidence on detected object and ensures accurate classification of the Traffic Sign.

Important functionalities

FCW using SFM – The purpose of detecting distance of an object from vehicle user is driving is to support Front Collision Warning and later Autonomous Emergency Breaking. Interestingly, demo shows how this can be achieved using single camera and *without any additional sensors'* input. SFM algorithm is used produce this information and gives distance of an object from bonnet.

LDW – Lane departure warning algorithm works on 640 x 360 resolutions to give Lane Departure Warning to the user, if vehicle departs right / left lane.

TLR – Red and Green traffic lights (signal lights) are detected and this can help in maneuvering car speed based on signal status.

PD/TSR/VD – The demo shows accurate detections of pedestrians, cyclists, vehicles and traffic signs. TSR can help in speed limit recognition while other ODs help for collision warning.

Please refer block diagram below which depicts complete data flow of the usecase and how it is achieved using 2 DSPs and 1 EVE.

Block Diagram:

Figure – TDA3x / 2x based EUNCAP demo

**IPC IN/OUT blocks are left-out to improve readability.

8.3 System Parameters

Refer to section 2.1 for common system parameters.

The benchmarks in this section are computed for HDMI capture (1080p60) of pre-recorded content and HDMI display (1080p60) scenario.

8.4 CPU Loading and Task Info

8.4.1 Total CPU Load

CPU	LOAD TYPE	TDA2XX CPU LOAD	TDA3XX CPU LOAD
IPU1_0	HWI	3.8%	4.1%
	SWI	1.1%	0.9%
	Total	25.6%	17.0%
DSP1	HWI	0.3%	0.3%
	SWI	0.1%	0.1%
	Total	59.8%	44.5%
DSP2	HWI	0.7%	0.6%
	SWI	0.2%	0.3%
	Total	40.5%	23.1%
EVE1	HWI	1.3%	0.9%
	SWI	0.2%	0.2%
	Total	78.7%	79.9%

8.4.2 Task Level Information and Task Level CPU Load

CPU	TASK NAME	TASK DESCRIPTION	TDA2XX CPU LOAD	TDA3XX CPU LOAD
IPU1-0	Stat Collector	Statistics collector	4.2%	2.5%
	Capture	Capture frames from sensor via VIP port	0.6%	0.5%
	DUP	Duplicate frame to send to display without scaling as well as to VPE to scale	0.2%	0.2%
	Display	Display frames via DSS	0.3%	0.2%
	ALGORITHM0		8.5%	3.4%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	2.0%	1.7%
	IPC OUT	To send frame to another processor	1.4%	1.3%
	IPC IN	To receive frames from another processor	0.2%	0.2%
DSP1	IPC + ALG Object Detect	IPC + Object detection algorithm	59.2%	43.8%

CPU	TASK NAME	TASK DESCRIPTION	TDA2XX CPU LOAD	TDA3XX CPU LOAD
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.2%	0.3%
DSP2	IPC + ALG Lane Detect	IPC + multiple algorithms	39.4%	22.0%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.2%	0.2%
EVE1	IPC + Feature plane compute	Feature plane compute algorithm + IPC	76.9%	78.5%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.3%	0.3%

NOTE: CPU load of 0.0% means the CPU load was so low it could not be measured with sufficient granularity in load calculations

NOTE: There could be minor variations of +/-0.1% CPU load in different runs of the same use-case

NOTE: Graphics Load is not accounted for in these measurements.

NOTE: Other than above tasks few additional tasks as listed below are active in each processor

- Message Q task: This task is used to listen to control messages sent by any other core. Normally at run-time very few control messages are sent hence this task does not appear in the task load print log
- Processor link task: This task is used to send generic non-link specific messages to another CPU. Normally at run-time very few messages are sent to this task hence this task does not appear in the task load print log
- Remote log client task (on IPU1-0 only): This task looks at the shared remote log buffer and outputs any strings to UART terminal. Normally during run-time prints are not done hence this task does not appear in the task load log

8.5 System Performance

COMPONENT	PARAMETER	TDA2XX	TDA3XX
Capture	Output fps	15fps	15fps
ALG – SOF (EVE1)	Output fps	15fps	15fps
	Avg time per frame	21.8ms	21.6ms
ALG – SFM (DSP2)	Output fps	15fps	15fps
	Avg time per frame	2.86ms	3.07ms
ALG_IMAGEPREPROCESS (EVE1)	Output fps	15fps	15fps
	Avg time per frame	6.31ms	6.60ms
ALG_IMG_PYRAMID	Output fps	15fps	15fps
	Avg time per frame	19.1ms	18.9ms

Lane Detect (DSP2)	Output fps	15fps	15fps
	Avg time per frame	2.42ms	2.39ms
ALG_CLR (DSP2)	Output fps	15fps	15fps
	Avg time per frame	3.64ms	3.40ms
Feature Plane Compute (EVE1)	Output fps	15fps	15fps
	Avg time per frame	21.45ms	21.86ms
Object Detect (DSP1)	Output fps	15fps	15fps
	Avg time per frame	32.7ms	31.5ms
Object classification (DSP2)	Output fps	15fps	15fps
	Avg time per frame	4.36ms	4.21ms
ALG_FCW (DSP2)	Output fps	15fps	15fps
	Avg time per frame	1.21ms	1.7ms
Object Draw (DSP2)	Output fps	15fps	15fps
	Avg time per frame	2.88ms	2.49ms
Display VID 1	Input fps	15fps	15fps
	VENC fps	60fps	60fps

NOTE: FPS numbers are rounded off to nearest integer

NOTE: The figures are for HDMI capture scenario.

NOTE: Performance data captured here is with OPP_NORM. Use OPP_HIGH MLO to get higher performance/FPS

8.6 System Memory Usage

8.6.1 Code/Data Memory Usage

Refer section 2.2 for common Code/Data Memory usage

8.6.2 Heap Memory Usage

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	TDA2XX MEMORY SIZE USED	TDA3XX MEMORY SIZE USED
IPU1-0	Local Heap	256 KB	19 KB	13 KB
	HDVPSS Descriptor Mem	1MB/256 KB	114 KB	36 KB
DSP1	L2	221 KB	208 KB	208 KB
	Local Heap	512 KB	13 KB	9 KB
DSP2	L2	221 KB	0KB	0KB
	Local Heap	512 KB	43 KB	38 KB
EVE1	L2	24 KB	19 KB	19 KB
	Local Heap	256KB	45 KB	41 KB
Shared Memory	SR0	128 KB/1MB	128 KB	1MB
	Frame Buffer (SR1)	350 MB/351 MB	164 MB	163 MB
	SR2 OCMC	0 KB	0 KB	0KB
	Remote Log Buffer	160 KB	158 KB	158 KB

8.6.3 DDR Bandwidth

PARAMETER	BANDWIDTH	TDA2XX	TDA3XX
EMIF Read Only	Avg	876 MB/s	NA
	Peak	1402 MB/s	NA
EMIF Write Only	Avg	386 MB/s	NA
	Peak	955 MB/s	NA
EMIF Read + Write	Avg	1262 MB/s	1172 MB/s
	Peak	2205 MB/s	2204 MB/s

8.7 Other Benchmarks

8.7.1 Processing Latency

		TDA2XX LATENCY	TDA3XX LATENCY
Capture to Display Latency (Display VID 2)	Avg	137ms	136ms
	Min	88ms	89ms
	Max	183ms	189ms

NOTE:

- This latency is as measured inside the system by software.
- There will an additional 1/(capture rate) added on top of this from sensor/receiver itself.
- There will an additional 1/(display rate) added on top of this for the frame to actually get displayed on the screen.
- Thus e.g. in a scenario of display at 60fps and capture at 30fps - 16.67ms + 33.33ms needs to be added to latency figures in above table to get true capture to display latency

8.7.2 Boot Time

PARAMETER	TDA2XX DURATION	TDA3XX DURATION
SBL to App main() (QSPI Boot) The boot time will change based on the mode of boot – SD, NOR flash or QSPI.	1.589s	1.641s
main() to Use-case create	0.340s	0.222s
Use-case create start to Live preview on display	0.575s	0.689s
Total Boot time	2.504s	2.552s

QSPI Boot time measurement done with TDA2xx ES2.0 samples
GUI and Sensor initialization time not accounted for.

9 Multi-channel LVDS 2D Surround view on TDA2xx & TDA2Ex

9.1 Overview

This use case consists of capture from multiple OV10635 camera's. The camera's are connected to TDA2Ex via FPD link with serializer and de-serializers in between. This configuration demonstrates a 2D Surround View on 4 Channels input. Only HDMI display is supported by this use-case.

9.2 Data Flow

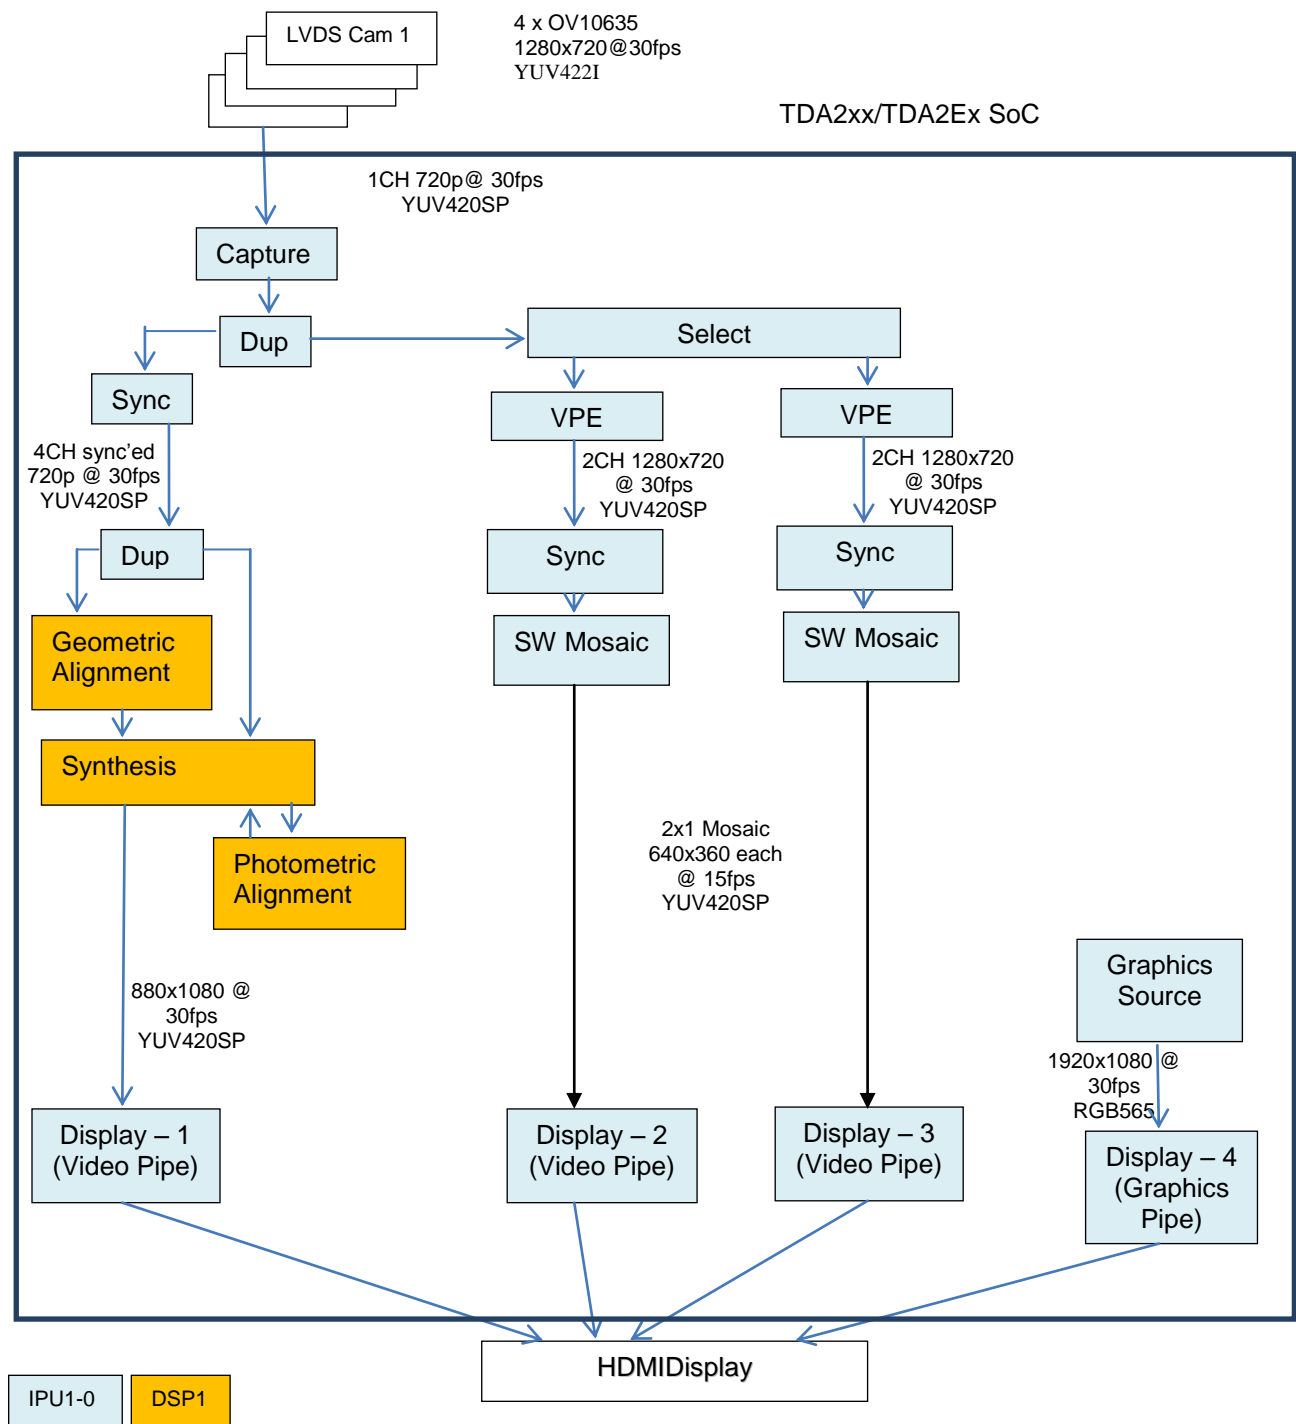

9.2.1 4CH LVDS capture, 2D Surround View demonstration

In this configuration we capture 4 Channel video from 4 OV1063x sensors @ 720p 30fps.

This 4 Channel data is duped. Using Select, VPE, Sync and Mosaic links the original data is downscaled and displayed as two 2x1 Mosaics.

The 4 Channels data via second path on DUP is sent to Sync Link where these captured frames are synced based on time stamps. After syncing we get a "group of sync'ed frames", one frame from each camera. This "group of sync'ed frames" areDup'ed. One set is passed on to algorithm links of Geometric alignment and synthesis link. Geometric alignment link provides look up table for geometric alignment among multiple views. Further Photometric alignment provides look up table for pixel transformations to compensate for the difference in lighting among different cameras. Based on these two look up tables and original 4 Ch Data, the Synthesis stage generates 2D surround view which is shown on the display.

Please note in dataflow diagram below IPC IN/OUT blocks are left-out to improve readability. Please assume these whenever CPU changes in the flow.

**IPC IN/OUT blocks are left-out to improve readability.

9.3 System Parameters (TDA2xx/ TDA2Ex)

Refer section 2.1 for common system parameters.

The parameters in this section are computed for HDMI display.

9.4 CPU Loading and Task Info (TDA2xx/TDA2Ex)

9.4.1 Total CPU Load

CPU	LOAD TYPE	TDA 2XX CPU LOAD	TDA 2EX CPU LOAD
IPU1_0	HWI	5.1%	5.4%
	SWI	1.3%	1.2%
	Total	29.4%	27.8%
DSP1	HWI	0.5%	0.6%
	SWI	0.1%	0.2%
	Total	50.3%	47.3%

9.4.2 Task Level Information and Task Level CPU Load

CPU	TASK NAME	TASK DESCRIPTION	TDA 2XX CPU LOAD	TDA 2EX CPU LOAD
IPU1_0	Capture	Capture frames from sensor via VIP port	0.9%	1.1%
	Display (4 links)	Display frames/graphics via DSS	1.6%	1.5%
	VPE (2 links)	Scale frames	4.5%	4.5%
	SYNC (3 links)	Sync frames based on timestamp from multiple channels	2.7%	2.6%
	DUP (2 links)	Duplicate frame to send to display without scaling as well as to VPE to scale	1.0%	1.2%
	Select	Selects specific channel data from i/p queue	0.5%	0.5%
	SW Mosaic (2 links)	Composite synced frames from multiple channels to form a single composite frame	1.5%	1.3%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	2.3%	1.9%
	IPC OUT (2 links)	To send frame to another processor	1.4%	1.3%
	IPC IN	To receive frames from another processor	0.3%	0.3%
DSP1	IPC +GAlign+PAlign+Synthesis +	All DSP1 Processing algorithms	49.5%	46.4%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.2%	0.1%

*NOTE: On DSP and similarly on EVE all links run in a single thread.

NOTE: CPU load of 0.0% means the CPU load was so low it could not be measured with sufficient granularity in load calculations

NOTE: There could be minor variations of +/-0.1% CPU load in different runs of the same use-case

NOTE: Graphics load is not accounted for in these measurements

NOTE: Other than above tasks few additional tasks as listed below are active in each processor

- Message Q task: This task is used to listen to control messages sent by any other core. Normally at run-time very few control messages are sent hence this task does not appear in the task load print log
- Processor link task: This task is used to send generic non-link specific messages to another CPU. Normally at run-time very few messages are sent to this task hence this task does not appear in the task load print log
- Remote log client task (on IPU1-0 only): This task looks at the shared remote log buffer and outputs any strings to UART terminal. Normally during run-time prints are not done hence this task does not appear in the task load log

9.5 System Performance (TDA2xx/TDA2Ex)

COMPONENT	PARAMETER	SRV 4CH FOR <i>Capture to Display1 path ONLY</i>	SRV 4CH FOR <i>Capture to Display1 path ONLY</i>
Capture	Output fps	30fps each on 4 Channels for SV	30fps each on 4 Channels for SV

Total Boot time	4.475s	4.720s

QSPI Boot time measurement done with TDA2xx ES2.0 samples
GUI and Sensor initialization time not accounted for.

10 Multi-channel AVB 2D Surround view Use case on TDA2xx & TDA2ex

10.1 Overview

This use case consists of AVB capture (Ethernet based input). The received data is in MJPEG format and decoded. This configuration demonstrates a 2D Surround View on 4 Channels input and Edge Detect on single channel in parallel. Only HDMI display is supported by this use-case.

10.2 Data Flow

10.2.1 Configuration 10: 4CH AVB capture, 2D Surround View demonstration

In this configuration we receive 4 Channel video from AVB Talker @ 720p 30fps per channel. These streams are decoded using MJPEG decoder. The original image from this channel is then Merged, Synced and displayed onto HDMI as a 2x1 Mosaic.

This 4 Channel data is duped. Using Select, VPE, Sync and Mosaic links the original data is downscaled and displayed as two 2x1 Mosaics.

The 4 Channels data via second path on DUP is sent to Sync Link where these captured frames are synced based on time stamps. After syncing we get a "group of sync'ed frames", one frame from each camera. This "group of sync'ed frames" are Dup'ed. One set is passed on to algorithm links of Geometric alignment and synthesis link. Geometric alignment link provides look up table for geometric alignment among multiple views. Further Photometric alignment provides look up table for pixel transformations to compensate for the difference in lighting among different cameras. Based on these two look up tables and original 4 Ch Data, the Synthesis stage generates 2D surround view which is shown on the display.

Please note in dataflow diagram below IPC IN/OUT blocks are left-out to improve readability. Please assume these whenever CPU changes in the flow.

10.3 System Parameters (TDA2xx)

Refer section 2.1 for common system parameters.

The parameters in this section are computed for HDMI display scenario.

All cores are operating with OPP_HIGH

Core	TDA2xx (MHz)	TDA2Ex (MHz)
MPU	1176.0	800.0
IPU1_0	212.8	212.8
IPU1_1	212.8	212.8
IPU2	212.8	212.8
DSP1	748.0	748.0
DSP2	748.0	
EVE1	650.0	
EVE2	650.0	
EVE3	650.0	
EVE4	650.0	
IVA	532.0	532.0

10.4 CPU Loading and Task Info (TDA2xx)

10.4.1 Total CPU Load

CPU	LOAD TYPE	CPU LOAD TDA2XX (%)	CPU LOAD TDA2EX (%)
IPU1-0	HWI	3.8%	3.3%
	SWI	1.8%	1.4%
	Total	29.3%	23.8%
IPU1-1	HWI	6.3%	5.7%
	SWI	1.0%	0.8%
	Total	28.0%	24.8%
DSP1	HWI	0.3%	0.4%
	SWI	0.1%	0.1%
	Total	26.4%	31.2%

10.4.2 Task Level Information and Task Level CPU Load

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD (SRV 4CH) TDA2XX	CPU LOAD (SRV 4CH) TDA2EX
IPU1-0	Stat Collector	Statistics collector	4.6%	2.3%
	Decoder	Decoder the mjpeg frame	2.2%	2.6%
	Display	Display frames	0.4%	0.4%

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD (SRV 4CH) TDA2XX	CPU LOAD (SRV 4CH) TDA2EX
	Sync	Sync frames based on timestamp from multiple channels	1.1%	1.2%
	DUP	Duplicate frame to send to display without scaling as well as to VPE to scale	0.1%	0.1%
	IPC OUT (3 links)	To send frame to another processor	2.2%	1.5%
	IPC IN (2 links)	To receive frames from another processor	1.1%	1.2%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	2.1%	2.0%
IPU1-1	AVBTX	Receives frames from network	1.1%	0.4%
	IPC OUT	To send frame to another processor	1.4%	1.6%
	IPC IN	To receive frames from another processor	0.8%	0.3%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	17.4%	16.0%
DSP1	IPC + ALG GALIGN + ALG PALIGN	IPC+ Alg processing	25.8%	30.5%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.2%	0.2%

*NOTE: On EVE all links run in a single thread.

NOTE: CPU load of 0.0% means the CPU load was so low it could not be measured with sufficient granularity in load calculations

NOTE: There could be minor variations of +/-0.1% CPU load in different runs of the same use-case

NOTE: Graphics load is not accounted for in these measurements.

NOTE: Other than above tasks few additional tasks as listed below are active in each processor

- Message Q task: This task is used to listen to control messages sent by any other core. Normally at run-time very few control messages are sent hence this task does not appear in the task load print log
- Processor link task: This task is used to send generic non-link specific messages to another CPU. Normally at run-time very few messages are sent to this task hence this task does not appear in the task load print log

- Remote log client task (on IPU1-0 only): This task looks at the shared remote log buffer and outputs any strings to UART terminal. Normally during run-time prints are not done hence this task does not appear in the task load log

10.5 System Performance (TDA2xx and TDA2ex)

COMPONENT	PARAMETER	SRV 4CH FOR Capture to Display1 path ONLY TDA2xx	SRV 4CH FOR Capture to Display1 path ONLY TDA2ex
AVB (IPU1-1)	Output FPS	120fps over 4 channels	120fps over 4 channels
	Data Rate	360 Mbps	360 Mbps
Decoder	Output FPS	120fps over 4 channels	120fps over 4 channels
	Avg time per frame	17ms	13.76ms
ALG Synthesis (DSP1)	Output fps	30fps	30fps
	Avg time per frame	13.9ms	12.23ms
ALG – Photometric Align(DSP1)	Output fps	30fps	30fps
	Avg time per frame	0.7ms	0.8ms
Display	Input FPS	30fps	30fps
	VENC FPS	60fps	60fps

NOTE: Since a AVB talker is used instead of live camera feed the fps on each channel is not fixed

NOTE: Linux talker sends the data in burst of frames which leads to drop at sync and decoder

NOTE: Only numbers for the AVB Capture to Display 1 path i.e. path for Surround view is shown above

NOTE: FPS numbers are rounded off to nearest integer.

NOTE: The above figures are for HDMI display.

10.6 System Memory Usage (TDA2xx & TDA2ex)

10.6.1 Code/Data Memory Usage

Refer section 2.2 for common Code/Data Memory usage.

10.6.2 Heap Memory Usage TDA2xx & TDA2ex

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	TDA 2XX MEMORY SIZE USED	TDA 2EX MEMORY SIZE USED
IPU1-0	Local Heap	256 KB	18 KB	13 KB
	HDVPSS Descriptor Mem	1MB	1MB	1MB
IPU1-1	Local Heap	640 KB	39 KB	35 KB
DSP1	L2	221KB	128 KB	128 KB
	Local Heap	512 KB	11 KB	6 KB
Shared	SR0	128KB	128 KB	128 KB

Memory	Frame Buffer (SR1)	350MB	181 MB	181 MB
	SR2 OCMC	0KB	0 KB	0 KB
	Remote Log Buffer	160 KB	158 KB	158 KB

10.6.3 DDR Bandwidth TDA2xx & TDA2ex

PARAMETER	BANDWIDTH	TDA2XX	TDA2EX
EMIF Read Only	Avg	718 MB/s	632 MB/s
	Peak	1783 MB/s	1688 MB/s
EMIF Write Only	Avg	553 MB/s	467 MB/s
	Peak	932 MB/s	908 MB/s
EMIF Read + Write	Avg	1270 MB/s	1100 MB/s
	Peak	2376 MB/s	2218 MB/s

10.7 Other Benchmarks (TDA2xx)

10.7.1 Processing Latency

This benchmark has not been measured for this configuration due to a known issue in Vision SDK stack where the latency figures are not initialized correctly.

10.7.2 Boot Time

PARAMETER	VALUE
SBL to App main() (QSPI Boot) The boot time will change based on the mode of boot – SD, NOR flash or QSPI.	1.589s
main() to Use-case create	1.30 s
Use-case create start to Live preview on display	2.23s (Talker should be started immediately)
Total Boot time	5.119s

QSPI Boot time measurement done with TDA2xx ES2.0 samples
GUI and Sensor initialization time not accounted for.

11 File Input/Output TI Deep Learning (TIDL) use case on TDA2XX

11.1 Overview

This use case reads the BGR planar input frames from the input file present on MMC/SD card applies the TIDL algorithm which is running on either EVE/DSP core and writes the output frame to the output file created on MMC/SD card.

The TIDL reads the 'network file' and 'parameter files' from the MMC/SD card which are the pre-requisites.

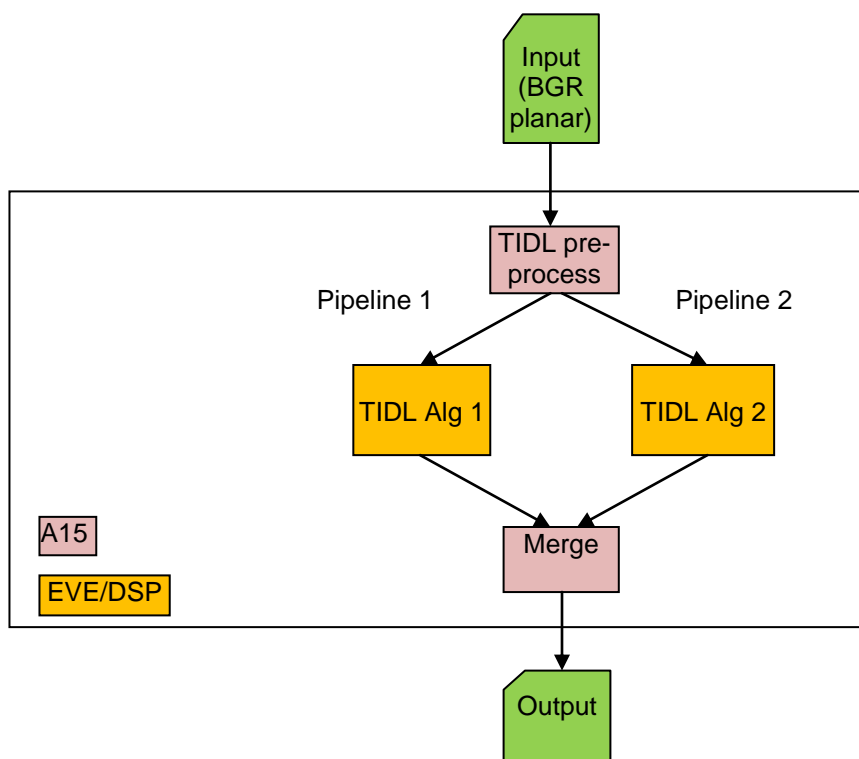

The TIDL generates an 8 bit class ID (0-4) for every input pixel. This class ID represents the segment into which the input pixel belongs to.

The FIVE segments supported are:

Class ID	Segment
0	None
1	Road
2	Pedestrian
3	Traffic Sign
4	Vehicle

11.2 Data Flow

The TIDL use case has one or more (up to 4 on EVE and up to 2 on DSP) processing pipelines which runs TIDL on the entire input frame. Every pipeline runs either on EVE core or DSP core.

11.3 TIDL performance

11.3.1 TIDL on DSP

DSP frequency = 600 MHz

Time taken to process one frame of resolution 1024x512 = 1006.07 ms

11.3.2 TIDL on EVE

EVE frequency = 535 MHz

Time taken to process one frame of resolution 1024x512 = 320.99 ms

12 ISS Capture Display Use case on TDA3xx

12.1 Overview

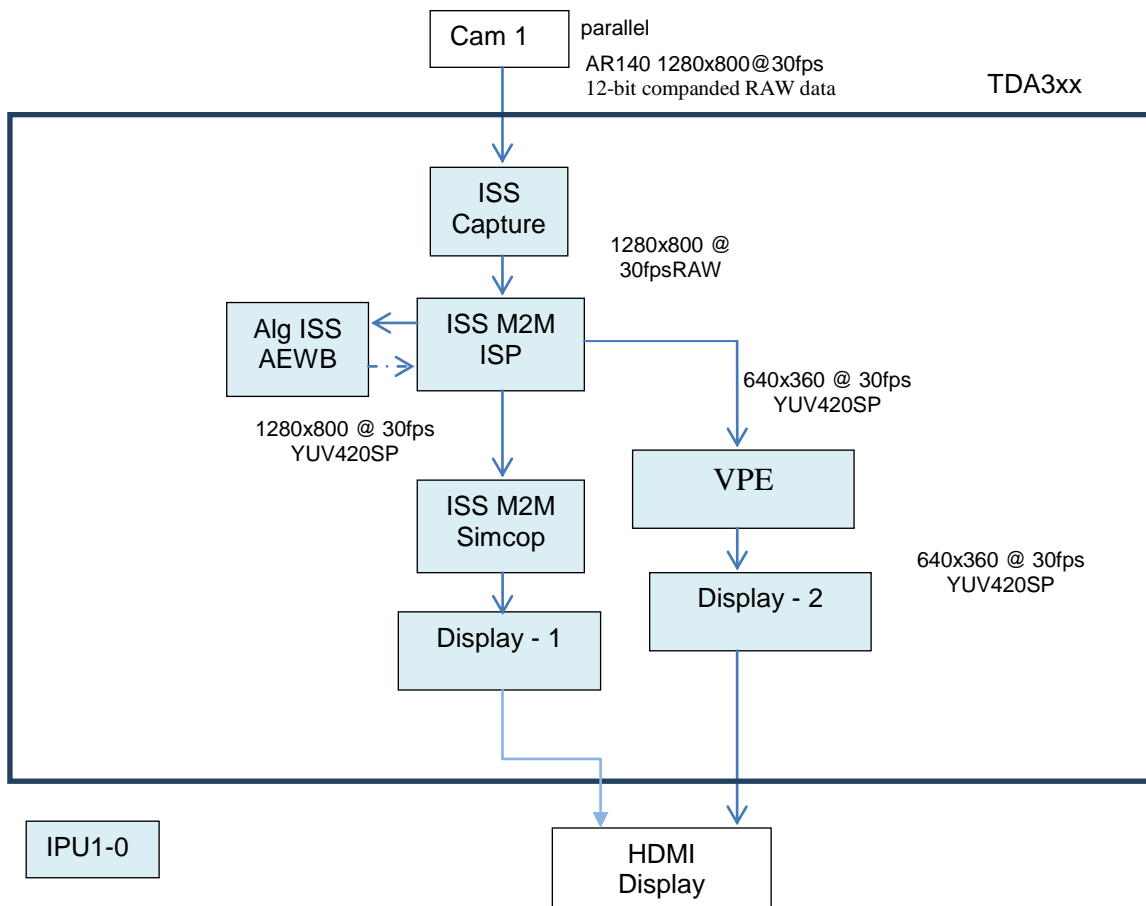

This configuration is used to demonstrate the ISS on TDA3xx.

12.2 DataFlow

12.2.1 ISS Capture Display example

In the ISS use-case, raw bayer data is captured from image sensor, like OV10640 or AR0140, by the ISS capture link. For OV10640 sensor capture is at 1280x720, whereas for AR140 it is at 1280x800. The sensor interface can be CSI2 or parallel. The bits/pixel of the raw data depends on the sensor and sensor mode being used, e.g. with AR140, 12-bit companded mode is used. The raw bayer data is fed to M2M (memory-to-memory) ISP (Image Signal Processor) link to convert it to YUV data. The ISP can operate in 2-pass WDR mode or 1-pass linear mode depending on sensor mode. There are two outputs from M2M ISP – Resizer A output of 1280x800 given to M2M SIMCOP, and Resizer B output of 640x360 sent to HDMI display. The M2M SIMCOP which performs optional LDC (Lens Distortion Correction) and/or VTNF (Video Temporal Noise Filter). The output of M2M SIMCOP is sent to HDMI display. The M2M ISP also outputs statistical data for the AE/AWB algorithm plugin. The AE/AWB algorithm feedback is applied to the M2M ISP link and/or sensor.

The data flow below shows HDMI display.

12.3 System Parameters (TDA3xx)

Refer to section 4.1 for common system parameters.

The benchmarks in this section are computed for AR0140 Parallel sensor and HDMI display (1080p60) scenario.

12.4 CPU Loading and Task Info (TDA3xx)

12.4.1 Total CPU Load

CPU	LOAD TYPE	CPU LOAD
IPU1_0	HWI	2.9%
	SWI	0.5%
	Total	18.0%

12.4.2 Task Level Information and Task Level CPU Load

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD
IPU1_0	ISS Capture	ISS Capture	0.1%
	ISSM2MISP	ISS memory to memory ISP	1.9%
	ISSM2MSIM COP	ISS memory to memory LDC+VTNF	0.7%
	ISS-Resizer0	ISS-Resizer0	1.4%
	Display	Display via DSS	0.7%
	Alg ISS AEWB	ISS Auto White Balance	3.2%
	Stat Collector	Statistics collector	1.7%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	1.3%

NOTE: CPU load of 0.0% means the CPU load was so low it could not be measured with sufficient granularity in load calculations

NOTE: There could be minor variations of +/-0.1% CPU load in different runs of the same use-case

NOTE: Graphics load is not accounted for in these measurements.

NOTE: Other than above tasks few additional tasks as listed below are active in each processor

- Message Q task: This task is used to listen to control messages sent by any other core. Normally at run-time very few control messages are sent hence this task does not appear in the task load print log
- Processor link task: This task is used to send generic non-link specific messages to another CPU. Normally at run-time very few messages are sent to this task hence this task does not appear in the task load print log

- Remote log client task (on IPU1-0 only): This task looks at the shared remote log buffer and outputs any strings to UART terminal. Normally during run-time prints are not done hence this task does not appear in the task load log

12.5 System Performance (TDA3xx)

COMPONENT	PARAMETER	
ISS Capture	Output fps	30fps
ISS M2M ISP	Input fps	30fps
	Output fps	30fps
	Avg time per frame	5.89ms
ISS M2M SIMCOP	Input fps	30fps
	Output fps	30fps
	Avg time per frame	5.65ms
ISS Resizer	Input fps	30fps
	Output fps	30fps
	Avg time per frame	2.46ms
Algorithm AEWB	Input fps	30fps
	Output fps	30fps
	Avg time per frame	1.23ms
Display	Input fps	30fps
	VENC fps	60fps

NOTE: FPS numbers are rounded off to nearest integer

12.6 System Memory Usage (TDA3xx)

12.6.1 Code/Data Memory Usage

Refer section 4.2 for common Code/Data Memory usage

12.6.2 Heap Memory Usage

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	MEMORY SIZE USED
IPU1-0	Local Heap	256 KB	13 KB
	HDPSS Descriptor Mem	256 KB	36 KB
Shared Memory	SR0	1MB	1MB
	Frame Buffer (SR1)	351 MB	29 MB
	Remote Log Buffer	160 KB	158 KB

12.7 Other Benchmarks (TDA3xx)

12.7.1 Processing Latency

		LATENCY
Capture to Display Latency (Display VID 1)	Avg	8.95ms
	Min	8.87ms
	Max	9.18ms

NOTE:

- This latency is as measured inside the system by software.
- There will an additional $1/(\text{capture rate})$ added on top of this from sensor/receiver itself.
- There will an additional $1/(\text{display rate})$ added on top of this for the frame to actually get displayed on the screen.
- Thus e.g. in a scenario of display at 60fps and capture at 30fps - $16.67\text{ms} + 33.33\text{ms}$ needs to be added to latency figures in above table to get true capture to display latency

12.7.2 DDR Bandwidth

PARAMETER	BANDWIDTH	
EMIF Read + Write	Avg	714 MB/s
	Peak	1547 MB/s

12.7.3 Boot Time

PARAMETER	DURATION
SBL to App main() (QSPI Boot) The boot time will change based on the mode of boot – SD, NOR flash or QSPI.	1.641s
main() to Use-case create	0.222 s
Use-case create start to Live preview on display	0.581 s
Total Boot time	2.444 s

QSPI Boot time measurement done with TDA3xx ES2.0 samples
GUI and Sensor initialization time not accounted for.

13 3D Surround View on TDA3xx

13.1 Overview

This usecase demonstrates a 4 channel 3D Surround View on TDA3x. 4 Channels of video is captured from four IMI/TIDA00262 sensors aggregated using UB960 and transmitted over CSI2 interface, CAL is used receive multiplexed video stream via CSI2 interface, ISP is used to convert from Bayer to YUV, DeWarp and Synthesis algorithms are used to generate 3D SRV. Please refer the TDA3xx user guide for required hardware setup. Only HDMI display is supported by this use-case.

13.2 DataFlow

13.2.1 4Ch capture Surround view demonstration

This usecase captures 4 Channel video from 4 IMI (OV10640) /AR0140 sensors @ 1280x720 / 1280x800 @30fps over CSI2 interface in Bayer Format (RAW12)

The ISP is used convert Bayer to YUV420 format, Select link is used provide H3A output channel 0 of ISP output to AEWB algorithm. AEWB algorithm will use this channel to determine exposure, and white balance. All processed channel are provided to synchronization link.

The Synchronization link will ensure all video streams are in same time line and provide synchronized output DeWarp Algorithm.

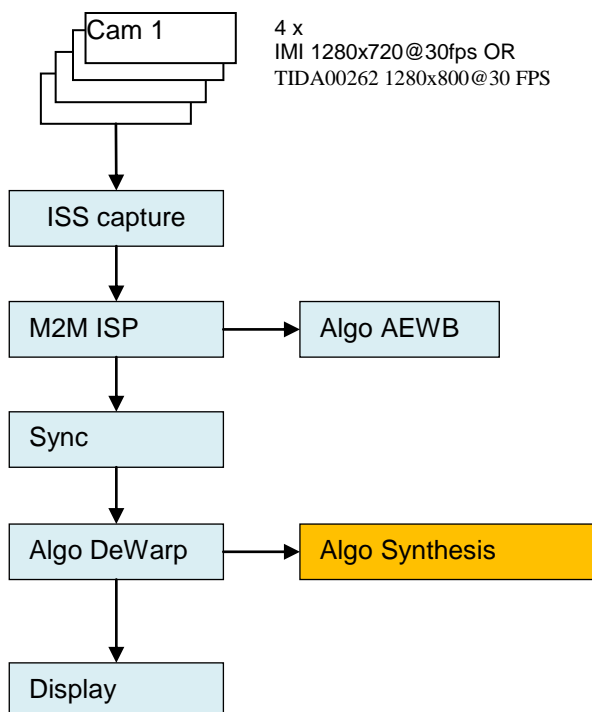

The DeWarp algorithm will use application provided (media thread) configuration and project 3D world points onto 2D plane and provide video frames for all channels to synthesis link. 3D world points are provided by (media thread)

The synthesis algorithm receives 4 channels of video and stitches them to provide a surround view.

Media Thread is used to read 3D world points (LDC LUTs) from mmc/sd card. In the boot up sequence, media thread reads LDC LUT for 1 view points and allows usecase creation to proceed and initiate read of remaining LDC LUTs while creation is in progress.

Once all the LDC LUTs are read from mmc/sd card, LDC LUTs are switched at capture frame rate to achieve smooth 3D transitions.

Please note in dataflow diagram below IPC IN/OUT blocks are left-out to improve readability. Please assume these whenever CPU changes in the flow.

13.3 System Parameters (TDA3xx)

Refer to section 4.1 for common system parameters. In addition following are the additional parameters for this particular usecase

- Camera Module : IMI (OV10640 sensor 1280x720 @ 30 FPS)
- Display Resolution : 1920 X 1080 @ 60 FPS
- MMC/SD Card Used : Sandisk micro sd, HC 1, class 10, 8 GB.

13.4 CPU Loading and Task Info (TDA3xx)

13.4.1 Total CPU Load

CPU	LOAD TYPE	CPU LOAD
IPU1_0	HWI	5.8%
	SWI	0.9%
	Total	29.1%
DSP1	HWI	0.3%
	SWI	0.1%
	Total	36.3%

13.4.2 Task Level Information and Task Level CPU Load

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD (%)
-----	-----------	------------------	--------------

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD (%)
IPU1_0	ISS Capture	Capture frames from sensor on CSI2 of ISS port	0.4%
	ISS M2M ISP	ISP M2M Processing	6.7%
	SYNC (1 link)	Sync frames based on timestamp from multiple channels	0.6%
	Algorithm0	AEWB algorithm	3.5%
	Algorithm1		4.9%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	1.4%
	IPC OUT	To send frame to another processor	0.5%
	IPC IN	To receive frames from another processor	0.3%
	Display	Display of video and GRPX frames	0.5%
	Stat Coll	Statistics Collector	2.5%
DSP1	IPC +PAlign+ Synthesis	All DSP1 Processing algorithms	35.6%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.3%

*NOTE: On DSP and similarly on EVE all links run in a single thread.

NOTE: CPU load of 0.0% means the CPU load was so low it could not be measured with sufficient granularity in load calculations

NOTE: There could be minor variations of +/-0.1% CPU load in different runs of the same use-case

NOTE: Graphics load is not accounted for in these measurements

NOTE: Other than above tasks few additional tasks as listed below are active in each processor

- Message Q task: This task is used to listen to control messages sent by any other core. Normally at run-time very few control messages are sent hence this task does not appear in the task load print log
- Processor link task: This task is used to send generic non-link specific messages to another CPU. Normally at run-time very few messages are sent to this task hence this task does not appear in the task load print log
- Remote log client task (on IPU1-0 only): This task looks at the shared remote log buffer and outputs any strings to UART terminal. Normally during run-time prints are not done hence this task does not appear in the task load log

13.5 System Performance (TDA3xx)

COMPONENT	PARAMETER	SRV 5CH FOR Capture to Display1 path ONLY
ISS Capture	Output fps	30fps each on 4 Channels for SV
ISS M2M ISP	Output fps	30fps each on 4 Channels for SV
	Avg time per a frame	5.37ms
AEWB	Output Fps	30fps
	Avg time per a frame	6.6ms
DeWarp	Output Fps	30fps
	Avg time per a frame	10.68ms
ALG Synthesis (DSP1)	Output fps	30fps
	Avg time per frame	10.62ms
Display VID 1 (1080P@60)	Input fps	30fps
	VENC fps	60fps

NOTE: FPS numbers are rounded off to nearest integer

NOTE: The above figures are for HDMI display.

13.5.1 Code/Data Memory Usage

Refer section 4.2 for common Code/Data Memory usage

13.5.2 Heap Memory Usage

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	MEMORY SIZE USED
IPU1-0	Local Heap	256 KB	110 KB
	HDVPSS Descriptor Mem	256 KB	36 KB
DSP1	L2	221 KB	128 KB
	Local Heap	512 KB	5 KB
Shared Memory	Frame Buffer (SR1)	351 MB	177 MB
	SR2 OCMC	0KB	0KB
	Remote Log Buffer	160 KB	158 KB

13.6 Other Benchmarks (TDA3xx)

13.6.1 Processing Latency

		LATENCY
Capture to Display Latency (Display VID 1)(SV)	Avg	46.02ms
	Min	44.10ms
	Max	46.78ms

NOTE:

- This latency is as measured inside the system by software.
- There will an additional 1 / (capture rate) added on top of this from sensor/receiver itself.

- There will an additional 1 / (display rate) added on top of this for the frame to actually get displayed on the screen.
- Thus e.g. in a scenario of display at 60fps and capture at 30fps - 16.67ms + 33.33ms needs to be added to latency figures in above table to get true capture to display latency

13.6.2 DDR Bandwidth

PARAMETER	BANDWIDTH	
	Avg	1511 MB/s
EMIF Read + Write	Peak	2009 MB/s

13.6.3 Boot Time

PARAMETER	VALUE
Use-case create start to live preview on display	9.38 s
3D Transitions start (90 view points)	38.01 s

Boot time measurement done with TDA3x ES2.0 samples.

13.6.4 Capture to Display Latency

The capture to display (Glass to Glass) latency for 3D Surround view is measured to be **110 msec**.

13.6.5 3D Surround View Fast Boot Use Case on TDA3x:

This use case is same as 3D Surround View use case with the speeded up boot sequence. Pl. refer to the VisionSDK_UserGuide_TDA3xx.pdf for steps to build for 3D Surround view fast boot.

Below are the boot times (EVM power ON to the first display frame queued) under different boot modes:

- **QSPI_SD : 5.3 seconds**
- **QSPI : 2.40 seconds**

13.6.6 Memory requirement per 'view point' of 3D Surround View use case:

The 3D Surround View shows multiple view points of the stitched Surround View, and every view point uses the following data and LUTs which are stored into MMC/SD card or QSPI. The view point data and LUTs are read into DDR buffers at the beginning of the 3D surround view use case. The number of viewpoints that can be supported depends on the amount of DDR memory available to hold the view point data and LUTs.

DATA TYPE	SIZE
View point header (view point parameters)	1 KB
Car Image	150 KB
LDC LUTs	150 KB
Synthesis Blend Table	1 byte per surround view output pixel = 758016 bytes for (752 x 1008) output.
TOTAL	1042 KB per view point

14 Fast boot ISS Capture + Object Detect + Display

14.1 Over view

This usecase demonstrates fast boot feature that can be applied for any usecase in vision_sdk. This section mentions performance numbers achieved for fast boot usecase from the boot time split perspective.

14.2 Dataflow

The usecase dataflow same as the object detect data flow motioned in [section 11.2](#)

More details about boot time optimization techniques can be found in VisionSDK_DevelopmentGuide.pdf

14.3 Usecase configuration for boot timer measurement

Please note following build configuration parameters for boot time measurement.

```

Binary size:

AppImage_UcEarly_BE - 7.92MB

AppImage_UcLate_BE - 7.60MB

Boot media – QSPI

Capture – AR140P
Display – LCD (10 inch)
Algorithm – Object Detect

14.4 Boot time

14.4.1 POR to Display time split

No.	Description	Time
1.	SBL	301 ms
2.	Sensor initialization time with I2C 400 KHz	141 ms
3.	Time take by Framework	256 ms
Power On Reset to Display Time		698 ms

As far as boot time is considered POR on to reset split is important which is mentioned above. If carefully observed measure time is spent in sensor initialization. This can be further reduced by programming resistor only needed, thus by reducing I2C read writes.

Overall vision_sdk takes $301 + 256 = \mathbf{557\ ms}$ only for capture + display usecase

14.4.2 POR to Object Detect

No.	Description	Time
1.	Power On to reset to Object Detect	1861 ms

This is the time when full Object Detect Usecase is functional since POR.

14.5 System Parameters (TDA3xx)

Refer to section 4.1 for common system parameters.

The benchmarks in this section are computed with AR140P sensor and LCD10inch display (1080p60).

14.6 CPU Loading and Task Info (TDA3xx)

14.6.1 Total CPU Load

CPU	LOAD TYPE	CPU LOAD	LOW POWER
IPU1_0	HWI	3.2%	1.9%
	SWI	0.6%	
	Total	22.4%	
DSP1	HWI	0.2%	96.4%
	SWI	0.1%	
	Total	2.6%	
EVE1	HWI	0.6%	16.1%
	SWI	0.1%	
	Total	81.3%	

14.6.2 Task Level Information and Task Level CPU Load

CPU	TASK NAME	TASK DESCRIPTION	CPU LOAD (%)
IPU1_0	ISS Capture	Capture frames from sensor on CSI2 of ISS port	0.1%
	ISS M2M ISP	ISP M2M Processing	3.0%
	SYNC (1 link)	Sync frames based on timestamp from multiple channels	0.5%
	Merge (2 links)	Merge frames from multiple channels	0.4%
	Algorithm0	AEWB algorithm	6.1%
	Algorithm1		0.9%
	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	1.9%
	IPC OUT	To send frame to another processor	0.4%
	IPC IN	To receive frames from another processor	0.2%
	Display	Display of video and GRPX frames	0.5%
	Stat Coll	Statistics Collector	2.2%
	IPC +PAlign+Synt hesis	All DSP1 Processing algorithms	2.1%
DSP1	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.2%
	IPC + Algorithm	All EVE1 Processing algorithms	80.2%
EVE1	UNKNOWN	This is unaccounted CPU load after subtracting the individual task load from total CPU Load	0.3%

*NOTE: On DSP and similarly on EVE all links run in a single thread.

NOTE: CPU load of 0.0% means the CPU load was so low it could not be measured with sufficient granularity in load calculations

NOTE: There could be minor variations of +/-0.1% CPU load in different runs of the same use-case

NOTE: Graphics load is not accounted for in these measurements

NOTE: Other than above tasks few additional tasks as listed below are active in each processor

- Message Q task: This task is used to listen to control messages sent by any other core. Normally at run-time very few control messages are sent hence this task does not appear in the task load print log

- Processor link task: This task is used to send generic non-link specific messages to another CPU. Normally at run-time very few messages are sent to this task hence this task does not appear in the task load print log
- Remote log client task (on IPU1-0 only): This task looks at the shared remote log buffer and outputs any strings to UART terminal. Normally during run-time prints are not done hence this task does not appear in the task load log

14.7 System Performance (TDA3xx)

COMPONENT	PARAMETER	SRV 5CH FOR Capture to Display1 path ONLY
ISS Capture	Output fps	30fps
ISS M2M ISP	Output fps	30fps
	Avg time per a frame	12.25ms
AEWB	Output Fps	30fps
	Avg time per a frame	2.13ms
ISS M2M SIMCOP	Output Fps	30fps
	Avg time per a frame	10.11ms
FP compute	Output fps	30fps
	Avg time per frame	26.01ms
Object detect	Output fps	30fps
	Avg time per frame	0.55ms
Object draw	Output fps	30fps
	Avg time per frame	0.4ms
Display VID 1 (720P@60)	Input fps	30fps
	VENC fps	60fps

NOTE: FPS numbers are rounded off to nearest integer

NOTE: The above figures are for HDMI display.

14.7.1 Code/Data Memory Usage

Refer section 4.2 for common Code/Data Memory usage

14.7.2 DDR Bandwidth

PARAMETER	BANDWIDTH	
	Avg	1215 MB/s
EMIF Read + Write	Peak	2171 MB/s

14.7.3 Heap Memory Usage

CPU	MEMORY SECTION	MEMORY SIZE RESERVED	MEMORY SIZE USED
IPU1-0	Local Heap	256 KB	101 KB
	HDVPSS Descriptor Mem	256 KB	36 KB
DSP1	L2	221 KB	208 KB
	Local Heap	512 KB	7 KB
Shared Memory	SR0	1MB	1MB
	Frame Buffer (SR1)	351 MB	41 MB
	SR2 OCMC	0KB	0KB
	Remote Log Buffer	160 KB	158 KB

15 Inter processor communication (IPC) latency

This section lists the latency measured when doing inter processor communication in Vision SDK

15.1 System Parameters (TDA2xx)

Refer to section 2.1 for common system parameters. The benchmarks in this section are computed for OV10635 capture (720p30) and LCD display scenario.

Other important system parameters are listed below

COMPONENT	PROPERTY	VALUE
IPC	Interrupt mechanism	Notify with SHM transport
	Information exchange mechanism	Non-Cache shared region in DDR (SR0)
Measurement mechanism	Timer used	CLK32KHZ
	Measurement unit	usecs
	Duration of Measurement	30 secs
	Number of frame exchanges over which results are averaged	30*30 = 900

15.2 IPC Latency measurements

In order to measure latency from all CPUs to all CPUs, three use-cases were run as shown below. The color in measurement table shows the use-case in which the IPC latency was measured.

Usecase 1	Capture(IPU1_0) -> IPU1_0 -> DSP1 -> EVE1 -> EVE2 -> DSP2 -> EVE3 -> A15_0 -> EVE4 -> IPU1_1 -> IPU1_0 -> Display(IPU1_0)
Usecase 2	Capture(IPU1_0) -> IPU1_0 -> A15_0 -> DSP1 -> DSP2 -> IPU1_1 -> EVE1 -> IPU1_0 -> Display(IPU1_0)
Usecase 3	Capture(IPU1_0) -> IPU1_0 -> DSP1 -> A15_0 -> IPU1_0 -> Display(IPU1_0)

15.2.1 IPC Buffer Passing Latency measurement (TDA2xx)

This measures the time taken from the point a new buffer is received by IPC OUT link on SRC CPU to the point in IPC IN link on DST CPU where the buffer is given to the next link in the processing chain.

Roughly this corresponds to the IPC Notify latency + the time taken to copy / translate buffer information from one CPU to another CPU via shared memory

The IPC buffer passing latency is shown below (All numbers in units of **micro-secs**)

DST \ SRC	A15	DSP	IPU	EVE
A15	NA	34	74	126
DSP	33	35	77	142
IPU	98	145	156	232
EVE	223	227	264	343

15.2.2 IPC Notify Latency Measurement (TDA2xx)

This measures the time taken from the point just before Notify_sendEvent() API is called on SRC CPU (in IPN OUT link) to the point (in IPC IN link) when SYSTEM_CMD_NEW_DATA command is received on DST CPU (NOTE: Notify callback (ISR) on DST CPU sends SYSTEM_CMD_NEW_DATA to IPC IN link on DST CPU).

Roughly this corresponds to IPC Notify send + Notify ISR + Task switch overhead.

The IPC Notify latency is shown below (All numbers in units of **micro-secs**)

DST \ SRC	A15	DSP	IPU	EVE
A15	NA	23	45	54
DSP	20	21	45	57
IPU	66	109	135	134
EVE	152	159	179	201

16 Revision History:

Version	Date	Revision History
1.00	1 Oct 2013	Updated for Vision SDK release v2.01
2.00	10 Mar 2014	Updated for Vision SDK release v2.02
2.01	27 Mar 2014	Add section on IPC latency measurement
2.02	4 th April 2014	Added Multi-channel AVB Surround view, Edge Detect Use case
2.03	31 st July 2014	Updated for Vision SDK release v2.03
2.04	14 th Nov 2014	Updated for Vision SDK release v2.05 for TDA2x and TDA3x use cases
2.06	4 th March 2015	Updated for Vision SDK release v2.06 for TDA2x and TDA3x, TDA2Ex, TDA2x-MC use cases
2.07	7 th July 2015	Updated for Vision SDK release v2.07 for TDA2x and TDA3x, TDA2Ex, TDA2x-MC use cases
2.08	15 th Oct 2015	Updated for Vision SDK release v2.08
2.09	21 st Mar 2016	Updated for Vision SDK release v2.09 Perform Datasheet cleanup for below: Removed Sparse optical flow, object detect & lane detect usecase Merged Analytics usecase of TDA2x & 3x Merged Multi channel LVDS usecase of TDA2x & 2Ex Rename Multichannel surround view usecase of TDA 3x to 3D surround view usecase
2.10	7 th July 2016	Updated for Vision SDK release v2.10 3D fast boot surround view readings are added
2.11	1 st Nov 2016	Updated for Vision SDK release v2.11
2.12	6 th Feb 2017	Updated for Vision SDK release v2.12
3.0	5 th July 2017	Updated for Vision SDK release v3.0 Removed XCAM related data readings
3.1	16 th Oct 2017	Updated for Vision SDK release v3.1
